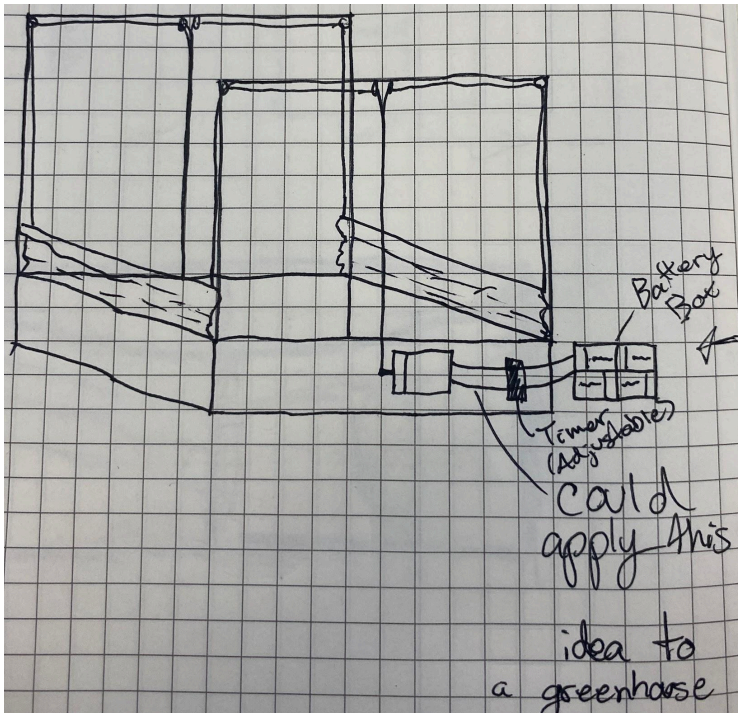
Element D: Design Concept Generation, Analysis, and Selection

Design Idea Generation (D1)



Date: 11/19/2024

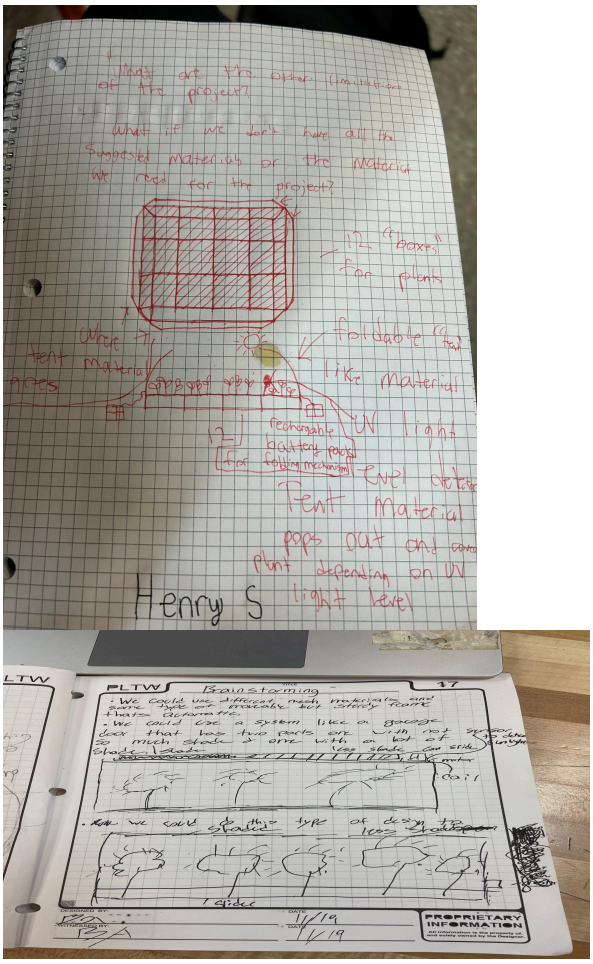
Description: My idea is a sort of frame over and around the 10x20 tray, the frame will have a shade fabric, tarp, mesh that will block some of the sunlight. There will be a motor that will be powered by a solar panel. The motor will pull a sequence of strings through guides that will pull the shade up

Date: 11/19/24

Description: My design idea is a flower box at the bottom, which is 9 feet in length and 12 feet

wide, and ½ ft. tall. There are going to be 12 total squares which have plants. On the sides, there will be tent-like polyester material with a motor, and a UV light detection system inside the plant area. The motor will make the polyester pop out and cover the plants so they don't receive too much sunlight. All measurements can be adjusted.

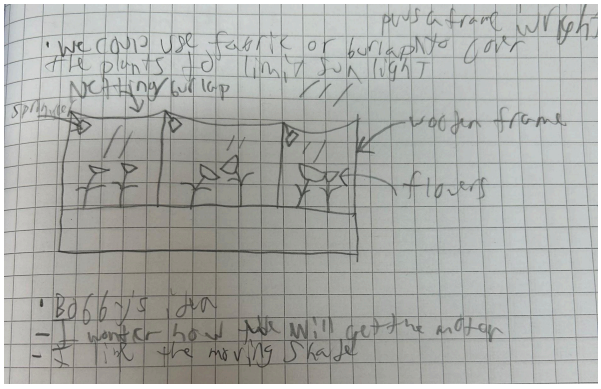
.



Date: 11/19/24

Description: My design revolves around a bed where the plants go. It has a ceiling that can move and let the sunlight in. I can move horizontally from left to right that can allow more or less sunlight in. It has a sensor on it that detects sunlights and pulls the cover over when needed

Date:12/3/2024



Description: My idea is 3 planter boxes with burlap over the top to control the amount of sun that is provided to the plants. I added sprinklers so you can water it if you couldn't reach the plants they could get watered.

	Weight	Design 1	Design 2	Design 3	Design 4
