D1: 1.)

2.)

3.)

D2: Our options were to either 3D print it or make it out of wood and the requirements were that it had to work. We decided to make it out of wood because the time it would take to make the 3d printed box would take forever. We used screws to connect the pecices of woods together.

D4:

We did not really have a plan of action while making the shelf, we kinda followed our prototype while making this. This was also our first attemp making this and it didnt really cost us anything. It only costed us our time because the construction teacher at the school let us use some of his spare wood and screws which was super nice of him.
