

Element H

Test 1

- Is the AI able to identify cancer based images shown to it?
 - Passing criteria
 - Identify the presence of cancer cells in the images at least 8/10 times.
 - Can be done by feeding the AI a mixture of cancerous scans and non-cancerous scans
 - Identify the form/stage of cancer accurately at least 7/10 times.
 - Able to detect how early or severe the cancer is. Can be cross-examined with doctor results.

Test 2

- How fast can the AI take to analyze and diagnose based on the data
 - Passing criteria
 - Analyze and diagnose results in less than a week.
 - User Satisfaction, at least 80% of medical staff are happy with reduced workload.
 - Polls can be sent out to workers on their opinions on work efficiency due to AI assistance.
