

2- Element B: Documentation and Analysis of Prior Design Attempts

Samuel:

<https://www.thespruce.com/simple-diy-under-bed-storage-5219637>

This design is capable of holding small compact things that you'd want in your room. It has wheels so it can move around with you wherever you go. Some flaws of this design are that it's very tiny, looks bulky, may not work well on carpet. If it were bigger, it could sit in the corner of your room, while still having wheels can keep its mobility feature while also being able to hold more. Not everyone would have the same design however, you could DIY and paint it a certain color as there would only be basic colors on the original product.

Kaylie:

<https://www.diydesignfanatic.com/2012/10/diy-storage-how-to-store-your-stuff.html>

DIY storage shelves are a really simple solution for storing your stuff easily and without breaking the bank. We all have things we need to store and keep organized so we can find it when you need it. I've found that storing your things in tubs on simple storage shelves made with 2 x 4s and OSB is the easiest and most efficient way to keep your storage accessible.

Kemi:

<https://www.instructables.com/How-to-Make-a-Wooden-Shelf/>

Wooden shelves are a sturdy solution to disorganization in the classroom. With the sturdiness and the simplicity of the design it is the perfect accessory for the classroom. The strongest shelves that are good for long term use and spacious storage tend to be materials like wood, and stainless steel, two things incorporated in this simple design.

Claudia:

<https://vivaciousvictorian.com/2021/02/24/adjustable-shelving-old-school-style/>

This design is able to be adjusted, with the idea that over time you can use it for other materials. Having a way to adjust the height of the shelves will make storing taller objects easier. Some flaws of this design are that in order to adjust th shelves, you have take out the storage to move the shelf to a higher or lower place. This design would be better usable if the shelves adjusted on a slider and not have to actually be removed. Some shelves could be skinnier than others to make more space for every material.
