Element B: Documentation and Analysis of Prior Design Attempts

Item		Notes/Links/Details
Prior Attempt 1: explain the problem the solution is trying to address and describe the solution in some detail. Include an image or images of the solution to help describe it. Don't use the same source to find information about all of your prior attempts. Get sources from a variety of places. The problem that our solution is trying to fix is the memorization and application of the quadratic formula. Khan academy is a good example of a source that helps students understand the topic, but i cant manage to find an example of a prior attempt that helps students memorize the formula.		t
Attempt 1 Pros: Provide evidence and explain what parts of previous solutions were successful at solving the defined problem and why based on design requirements. Khan academy has multiple pros one being that their an online base learning program witch means that students can get access to the knowledge they need without buy a game or a physical thing. Inadittion khan academy also makes their program free wich means that its accessible to less fortunate students.	Attempt 1 Cons: Provide evidence and explain what parts of previous solutions were unsuccessful at solving the defined problem and why based on design requirements. This prior attempt lack the part that is meant to help students memorize the topic. In my experience the quadratic formula is not something that anyones explained why it works so memorizing has been the best option for me and many other students alike.	
Prior Attempt 2: The problem that our solution is trying to fix is the memorization and application of the quadratic formula. Attempt is a good example of a source that helps students understand the topic it also does a good job of explaining the topic in addition to giving visual representation.		
Attempt 2 Pros: *visual representation	Attempt 2 Cons: • Can seem intimidating	

*Good explanations *Attempts to make math fun MathisFun does a good job at delivering the knowledge in the a engaging and give fun example for example a soccer kick.	• Alot of information at once • High attention span needed MathisFun can improve their solution by separating their information into multiple pages so that someone with lower attention span can still benefit from the information.	
Prior Attempt 3: The problem that our solution is trying to fix is the memorization and application of the quadratic formula. Attempt is a good example of a source that helps students understand the topic it also does a good job at explaining the topic in addition to giving them a bit-sized amount of information.		
Attempt 3 Pros: *bit sized amount of information *good explanations * gives a ton of examples of the quadratic formula at us GCSE Maths does a good job atgiving alot of examples for the students to test their knowledge on the topic.	Attempt 3 Cons: *intimidating I think that their biggest con is the fact that the youtube channel is intimidating and come off as scary and hard to learn. (I know the subject)	
Prior Attempt 4: The problem that our solution is trying to fix is the memorization and application of the quadratic formula. Attempt is a good example of a source that helps students understand the topic it also does a good job at keeping the students engaged and made the practicing the formula as fun as possible.		
Attempt 4 Pros: *fun *interactive *attention grabbing The attempt does a good job at making it so that the students stay engaged and the fact that they made learning a game is a good strategy.	Attempt 4 Cons:	
Prior Attempt 5:		
Attempt 5 Pros:	Attempt 5 Cons:	

Analysis & Summary of prior attempts:		

	score = 5	score = 4	score = 3	score = 2	score = 1	score = 0
B1. Documentation of plausible prior attempts to solve the problem and/or related problems is drawn from _____.	a wide array of clearly-identified and consistently-credible sources	a variety of clearly-identified and consistently-credible sources	several—but not necessarily varied—clearly-identified and generally-credible sources	a limited number of sources, some of which may not be clearly identified and/or credible	only one or two sources that may not be clearly identified and/or credible	missing or minimal (a single source that is not clearly identified and/or credible)
B2. The analysis of past and current attempts to solve the problem — including both strengths and shortcomings — _____.	is consistently clear, detailed, and supported by relevant data	is clear, generally detailed, and supported by relevant data	is generally clear and contains some detail and relevant supporting data	is overly general and contains little detail and/or relevant supporting data	is vague and is missing any relevant details and/or relevant supporting data	cannot be inferred from information intended as analysis of past and/or current attempts to solve the problem
