Element B: Documentation and Analysis of Prior Design Attempts

Prior Design Attempt #1 - The Drop Stop

Drop Stop (2024) *DON'T DROP AND DRIVE The Original Patented Seat Gap Filler*

<https://www.buydropstop.com/>

Reputable vendor and manufacturer

https://www.buydropstop.com/images/photo_drop_stop_product_transparent.png

Details

The drop stop is a foamy rectangular prism that tightly fits in the gaps between car seats and prevents items from falling down the hole. It has an opening at the end so that the seatbelt buckle can pass through it easily.

Analysis

While the drop stop is an easy way to hold items from falling down the hole, it, unfortunately, does not fit every car model seat gap and is thus disregarded as a solution to this problem.

Prior Design Attempt #2 - Pool Noodle

USA Today (2023) Never lose your phone to the under-seat abyss with these genius DIY seat gap fillers

Details

This design involves inserting a foamy pool noodle into the car gap to fill it. It is a budget-friendly solution and claims to be strong enough to hold multiple items.

Analysis

Though it may seem like a reliable solution for preventing items from falling into the abyss, this design has some movement issues. Whenever the seat is moved forward or backward, or sat up or reclined, the pool noodle dislocates itself and is thus not a great solution for this problem.
