

Element B

Documentation of plausible prior attempts to solve the problem and/or related problems is drawn from a wide array of clearly identified and consistently credible sources; the analysis of past and current attempts to solve the problem — including both strengths and shortcomings — is consistently clear, detailed, and supported by relevant data.

Our group tried our best to find an alternative, plausible solution for the mirror project. Unfortunately, many of previous attempts have been attempts at a static, design-based solution, unlike what the primary stakeholders want, which is a fully customizable mirror that emits light to give a magical effect to be shown in the Beauty and the Beast play. Taking this knowledge, we concluded that our vision was difficult to pull off, as if it were simple, a lot of previous attempts would have been successful and made available to view by the public or can be seen online. So to minimize risk, and also be as relevant as possible to what the primary stakeholder want out of this project, our group ultimately decided that we could merge design aspects of previous attempts with our vision.
