Element B: Documentation and Analysis of Prior Design Attempts

In the boys dorms the dorm residents need a place to put their toiletries because there is not a built-in shelf in the communal showers and setting things on the floor is unsanitary. Solving the problem can help the dorm students place their toiletries somewhere without having to set it down on the ground. The problem is that there is nowhere to hang your shampoo and that leads to people putting it on the ground.

The shower caddy is good because it is able to hold a lot of toiletries and is able to hang off the ground. However, the caddy costs \$16 and not everybody has one. The shower caddy is also able to hold things on both sides but it takes up space on the other side of the wall.

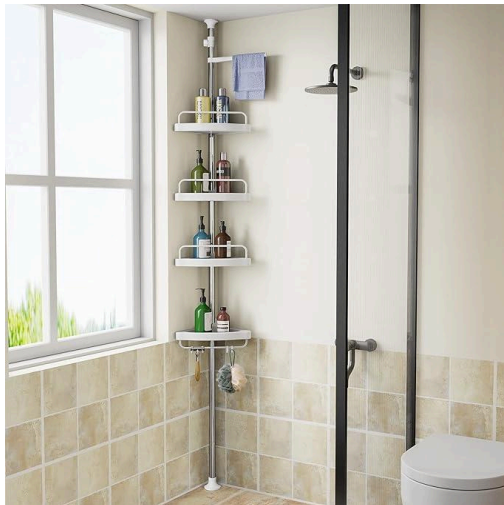

The shelf is great because it is waterproof and is able to hold shampoo bottles. The size is also reasonable and fits perfectly in the corner of the shower. The shelf is also easily removable because of the suction cups on the back. The suction cups will be useful because they have hooks attached which will be easy to

place the shelf on. Some of the cons are that the shelf may not be able to hold the weight of the bottles. The shelves suction cups may not be able to stick to the wall because of the material. The material of the wall is tile and when it is wet it gets slick so the suction cup may slide off.

The shower curtain caddy is good because it is able to hold a lot of toiletries and will last for a very long time. The shower curtain is also a very good price which will be good for the community. The curtain may fall when there is a lot of weight inside. The shower curtain may also take up a lot of space and that is what we do not want.

The tension rod is good because it is able to hold a lot of materials and is very sturdy. The tension rod also has water resistant material so that it will not mold. The bad thing about the tension rod is that the price is \$50 and everyone may not get one.
