

Element B: Documentation and Analysis of Prior Design Attempts

Prior Attempts	Description	Strengths/Weaknesses	Source	How we found sources and breadth/validity
Tactile Panel (Sensory One)	-Utilizes wall panels and tiles to turn regular walls stimulative. -Variety of different wall tiles with different textures derived from raised and recessed areas and shapes. -Varies in size, with smaller tiles with dimensions of 40 by 40 cm and bigger panels with dimensions of 144.8 by 119.4 cm. -Smaller tiles have special fixings allowing them to be attached to any wall individually or in groups. -Bigger panels have more variation,	Strengths: -Is not permanent in its place -Variety of unique designs -Small tiles can be stored due to small size Weaknesses: - Bigger panel is a large space commitment. -Bigger panel cannot be stored easily. -Interchangeability is	“Tactile Wall Panels & Tiles for Sensory Rooms: Sensoryone.” <i>Sensory One</i>, 22 Nov. 2021, sensoryone.com/tactile-wall-panels-tiles/.	- Designed by Mike Ayres, an award winning designer who has specialized in multi-sensory products and experiences for over 35 years.

	including UV and LED reactivity for glow in the dark features.	not optimized: must hang and rehang with every change to panel setup.		
 				
Sensory Wall Panels (enabling device)	- Uses interchangeable panels - Provides everything from tactile, auditory, and visual sensory feedback - Uses batteries	Strengths: - Allows for plenty of modification - Can be made to appeal to the different preferences of the kids - Can create a	https://enablingdevices.com/product/sensory-wall-panels/	- Designed by Enabling devices who has been working on sensory devices for over 40 years

	- Is around \$230-\$390 -	peaceful and calming environment - Reduce discomfort - Improve communication ability Weaknesses: - Is expensive - Likely is not easily fixed or replaced -		
				
Interchangeable sensory wall	- Each Activity Panel is sized at 17 inches in height, 16 inches in width, and 3¼	Strengths: - The interchangeable design allows for the creation of a	“Interchangeable Sensory Wall - Interactive Wall Activities - Wide Range of Play Products.” Playscapes,	A company called “playscapes” is offering this product. They have installed this product in various hospitals,

	inches in thickness. - Ensures safety through sturdy construction and secure panel interchangeability. - Utilize Guide Rails (120189 - 120191) to create a personalized Sensory Wall. - Constructed from durable birch wood for longevity and sturdiness.	custom Sensory Wall, catering to the specific needs and preferences of users. - Prevents monotony by keeping the sensory wall constantly fresh and interesting. - The product may be more suitable for specific age groups, potentially limiting its usefulness as children grow older and their developmental needs change. Weaknesses: - The use of quality materials like birch wood may contribute to a higher cost, potentially limiting accessibility for	playscapes.com/products/wall-activity-elements/custom-sensory-wall.html. Analysis:

We have looked at many different designs for a tactile wall and analyzed each in order to derive inspiration and ideas for our own tactile sensory wall. Each design has a unique way of featuring tactiles, so we will take them into consideration when designing our own tactile wall.

- The first design labeled 'Tactile Panel' features small panels which are easily stored and interchangeable as well as bigger panels which are not. Because our goal is to optimize space organization, smaller panels may be better suited for us.
- The second design labeled 'Sensory wall panels' appeals to a variety of different designs, but is heavy in cost and is not as interchangeable, making it a too complex design for what we need.
- The third design labeled 'Interchangeable Sensory Wall' is interchangeable, but costly. The biggest takeaway from this design that we can use for our own tactiles are the various interactive designs such as mazes, push buttons, etc.
- The fourth design labeled 'Organization of Space' features several applicable ideas for keeping the sensory space organized.
- The fifth design labeled 'door panel for cabinet' gives us the mechanics of a potential design for a cubby cover for stored items.

In deciding where our tactile wall should be placed, we must first examine the space we have to work with. Below are some sketches and drawings of the sensory space we will be working with:

The middle island labeled A is not being utilized despite taking a large amount of space. This makes it a potential space for tactiles.

Our group also has the job of finding a cover for cabinets/cubbies that will be storing files as means of organizing the sensory room. The purpose of providing cover for the cubbies includes keeping stored items away from children who are using the sensory room, and adding to the organized aesthetic by removing stored items from view. This will help with reducing clutter in the sensory space, which has the potential to boost the children's focus and reduce sensory overload.
