

Images and evidence should be included throughout.

Manager should make a copy, share with each member of the group and (jmiranda@rpsk12.org, pnguyen@rpsk12.org), make it viewable by “ANYONE with the link” and submit it to Google Classroom when complete. Delete the notes in red when you are done with each section.

Group Members: Adam Assour , Santi

Element C: Presentation and Justification of Solution Design Requirements

Design Requirement List:				
Priority (star high priority)	Requirement	Explanation (research and stakeholders)	Source (research and stakeholders)	Measurement for Success
5	Engaging	Its important that a student finds the solution interesting so that a students doesnt find it a chore.	Josh Student Engagement: Why It's Important and How To Promote It	survey /exit ticket
5	Not intimidating	If it comes of as intimidating their is a higher chance that the student is not as intrigued and their for doesnt get as much out of it.	JOSHYPOO	Observation
5	Fun	If the student finds it fun their is a higher chance that the student learns more.	Article	survey /exit ticket
3	Can be adaptive base on needs	If the object can be adapted then the student can learn different things based on what they need to learn. (different students need different thing)	Zaraius	survey /exit ticket
5	Cheap	If the solution is cheap then their is a higher chance that teachers and administrators consider it for their	Pressure to Close Schools Is Ramping Up. What Districts Need to Know	survey /exit ticket

		students.		
5	3d-printable or laser cut able	If the solution is 3d-printable it would make the solutions cheap and if it was to break it makes it easier to replace or fix it.	Mihailo	survey /exit ticket
3	Size	If it is smaller it makes it easier to store and takes up overall less space.(4x4)	josh	Observation
3	Astetics	If it looks more professional then students and teachers might be more inclined to use the solution.	Mihailo	Observation
1000000	Understanding the material	The whole point of the solution is so that the student learn the desired material.	Vincent	Presenytation on what they learned. Kahoot to make it funner.(mabey)

Notes:

- Your design requirements should be tethered to all that you've written in Element A. This subelement measures how many of your design requirements are related to the research you did and the information you found in Element A.
- You must give a numbered prioritized list (and stated that it is prioritized) to get higher than a 0 AND state whether each requirement is high or low priority.
- "objective" means details, things we can measure
- Each design requirement needs to be measurable so one can objectively assess if that design requirement is valid.
- The design requirements should be very clear and comprehensive so that they springboard you toward a solution.
- You are NOT looking to describe or really even formulate the specific design at this stage. That is for Elements D-F. You are simply focusing on the design requirements that lead to a solution.
- Take care to not list so many requirements that it becomes unlikely to create a viable solution--a viable solution must meet ALL requirements, so only list requirements that your successful design will meet.
- You may revisit this element as needed to reflect your design evolution.
- Describe in detail how these design requirements will meet the needs of the clearly identified stakeholder groups.

- Document how your stakeholders and stakeholder groups have seen and agree with your design requirements.
- Reminder: Primary stakeholder groups need to be identified clearly in Element A.

	score = 5	score = 4	score = 3	score = 2	score = 1	score = 0
C1. Determination of design requirements. _____ design requirements are related to prior research.	80%-100% of	60%-79% of	40%-59% of	20%-39% of	1%-19% of	No
C2. Requirements list. Design requirements _____.	are listed, prioritized, clear, and detailed	are listed, prioritized, generally clear, and detailed	are listed, prioritized, generally clear, and somewhat detailed	are listed and prioritized but some or all may be incomplete and/or lack specificity	are listed, formatted, and prioritization is attempted, but these may be partial and/or overly general	are not present or are too vague
C3. Quantity of high-priority design requirements. _____ of the design requirements listed are identified as high priority.	Five	Four	Three	Two	One	None
C4. Objective & measurable. Design requirements _____.	are consistently objective and measurable	are nearly always objective and measurable	are generally objective and measurable	may be only sometimes objective and/or measurable	are insufficiently measurable	are not measurable
C5. Leading to solution. Design requirements _____.	would be highly likely to lead to a tangible and viable problem solution	would be likely to lead to a tangible and viable problem solution	have a potential to lead to a tangible and viable problem solution	have some potential to lead to a tangible and viable problem solution	have little potential to lead to a tangible and viable problem solution	cannot lead to a tangible and viable problem solution
C6. Primary stakeholder validation. There is evidence that requirements represent the needs of, and have been validated by, _____ primary stakeholder groups.	80%-100% of	60%-79% of	40%-59% of	20%-39% of	1%-19% of	no
