

Element C: Presentation and Justification of Solution Design Requirements

It's imperative to design the device's functions with efficiency and accessibility in mind, catering to users of all technical levels, akin to a child navigating effortlessly. Utilizing eco-friendly, durable materials ensures sustainability without sacrificing durability, safeguarding against damage from accidental drops. Reliable connectivity options, bolstered by advanced signal reception tech, guarantee internet access anywhere, crucial for swift response in emergencies. Cutting-edge tracking capabilities, enabled by robust signal reception, ensure accurate location pinpointing, vital for rescue operations. Discreet design elements conceal the device from potential threats, maximizing wearer safety. Customizable accessories foster ownership, encouraging daily use. Balancing affordability with premium features maintains competitiveness while maximizing consumer satisfaction and market appeal.

Design Requirement #1 (HIGH Priority)

1: Devices must be easy to operate and easy to use.

Explanation: When the device can be operated so that a child can use it quickly and easily.

Design Requirement #2 (HIGH Priority)

2: Sustainable Materials that won't break

Explanation: If the device gets dropped or slammed against something, it wouldn't break as easily.

Design Requirement #3 (HIGH Priority)

3: Device has service and can pick up the internet from anywhere and receive signals.

Explanation: Make sure that the device can keep working as it stays connected to the internet wherever it goes.

Design Requirement #4 (HIGH Priority)

4: Tracker can successfully work and pick up signals from anywhere.

Explanation: If the tracker can pick up signals, we can locate the child and rescue them.

Design Requirement #5 (HIGH Priority)

5: Device can blend in so the kidnapper doesn't know they are wearing it.

Explanation: If the device blends in, the kidnapper wouldn't know it's on the child so the child has a better chance of getting help from the authorities.

Design Requirement #6 (LOW Priority)

6: Device would be something kids would want to wear.

Explanation: If the kids wear it and like the style, they would keep it on. So if they get kidnapped the device would still be on them.

Design Requirement #7 (LOW Priority)

7: should be at a lil higher price if necessary.

Explanation: AirTags are \$30 so try to be less or the same cost.

It's imperative to design the device's functions with efficiency and accessibility in mind, catering to users of all technical levels, akin to a child navigating effortlessly. Utilizing eco-friendly, durable materials ensures sustainability without sacrificing durability, safeguarding against damage from accidental drops. Reliable connectivity options, bolstered by advanced signal reception tech, guarantee internet access anywhere, crucial for swift response in emergencies. Cutting-edge tracking capabilities, enabled by robust signal reception, ensure accurate location pinpointing, vital for rescue operations. Discreet design elements conceal the device from potential threats, maximizing wearer safety. Customizable accessories foster ownership, encouraging daily use. Balancing affordability with premium features maintains competitiveness while maximizing consumer satisfaction and market appeal.
