

Element C:

Presenting and Justifying of Solution Design Requirements

Creating a budget-friendly, easy, and time efficient prototype that will allow the librarian to see all areas of the library should be part of future solutions.

Proposition - To use a set of mirrors as a form of constant overwatch.

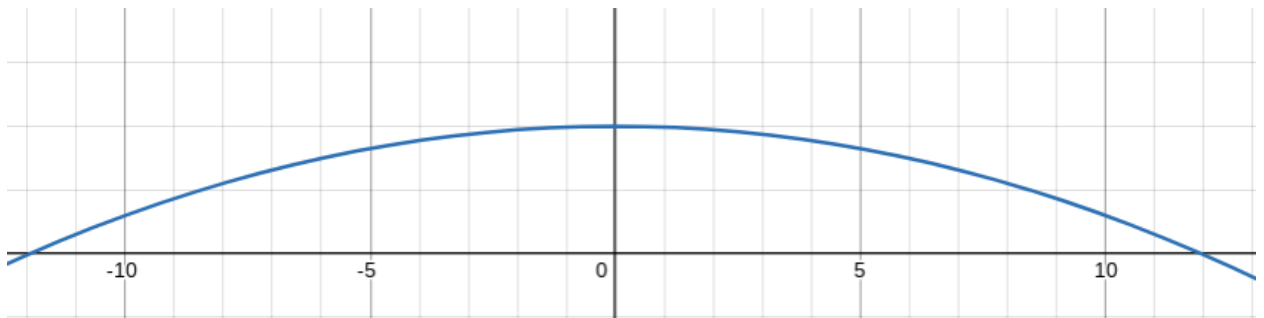

Criteria - Easily accessible, does not require too much movement, can keep an eye on everywhere in the library at once, easily manageable.

Confirmation - We will conduct background research on the mechanics of reflections through mirrors and test which solutions may work better than others.

Practicality Confirmation - We can make a prototype to test out our solution and make it as efficient as possible.

Design Idea:

Curve of the Mirror:

Equation:

$$-0.014x^2 + 2$$
