[MyDesign Portfolio

Element C Initial Template

Element C: Presentation and Justification of Solution Design Requirements

Access to power outlet #1 (HIGH Priority)

Battery needs to provide backup power during a power outage to be able to charge.

All battery storage design includes some implementation of a connection that links to an outlet. This would power that battery the chargers and ensure high productivity

Easily accessible #2 (HIGH Priority)

The Students and Teacher need to be able to acquire the batteries quickly to ensure work continues at a steady pace.

The shelf plan makes grabbing a charger really easy and up in front similar to how

Battery organization #3 (HIGH Priority)

The batteries should be organized by their type and brand

Explain how this design requirement directly ties to your prior research..

Cable management #4 (HIGH Priority)

Cables should go through thought out paths in order to prevent a mess and to prevent the disorganization that had occurred in the original battery storage system.

Most designs have cable paths to ensure a conform and clean set up

Off of the table #5 (HIGH Priority)

Free up tablespace for more machines or just to remove clutter from work spaces

Name: _____

Date: _____

Class: _____

Most designs have a dedicated spot like a wall or shelf where only the batteries and their chargers reside.

Flexible for future expansion #6 (LOW Priority)

It would be prudent to implement a future proof design that wouldn't go outdated when new or different batteries are purchased.

We can see a modular design where the storage can be configured to the batteries we would use ...
