

Element c

C1. list of of requirements

- PVC pipes
- Heat-gun, sharpened piece of PVC
- Rubber Gloves
- 3d printed seals
- Tape
- Electrical water-pump, solar panel.
- Small planting cups.

C2. How do these meet the requirements for stakeholders?

We were requested to make a 4-tower hydroponic matrix, and this is what we did. Four towers most having 8 holes on each, connected in a plus-shape pattern.

C3. Leading to solution.

We needed compact vertical holders that could dispense and recycle water, so we took pvc, made holes in it with inwards bent bottoms to make them able to hold the plant cups.

C4. How do the stakeholders agree with the design?

They saw the design, were a bit iffy about the rubber glove filters, though found it interesting how they actually managed to work to keep the water in
