Element C: Presentation and Justification of Solution Design Requirements

In the boys dorms the dorm residents need a place to put their toiletries because there is not a built-in shelf in the communal showers and setting things on the floor is unsanitary. Solving the problem can help the dorm students place their toiletries somewhere without having to set it down on the ground. The problem is that there is nowhere to hang your shampoo and that leads to people putting it on the ground.

The ideal solution should meet several criteria. The caddy must be cost-efficient, ensuring that we make the most of our resources. The caddy should be lightweight, offering ease of handling and maneuverability. The caddy must be capable of supporting a 10 lbs weight load. The solution should be easily removable for added convenience and allow quick adjustments. Lastly, it should be easy to clean, ensuring that maintenance is straightforward and efficient.

In our design process, we prioritize high priority items characterized by their water proof design and the elevation that is easily accessible to varying heights within a compact 6 in x 6 in x 12 in space. These high-priority items are our central focus, shaping our creative and strategic efforts as we optimize their functionality and effectiveness.

PRIORITized LIST of Design Requirements
Waterproof -high priority
Elevated off the floor but reachable for students of varying heights- high priority

Must be small 6 in x 6 in x 12 in - high priority
Fits five bottles-
Sanitary easy to clean no standing water
Lightweight- less than 2 lbs Able to be removed easily with one hand
Sturdy can hold up to 10 lbs
Cost efficient- less than \$10

We talked with a handful of resident stakeholders who approved of the design requirements. Mr. K, our main stakeholder, director of the boys dormitory also approved of our design requirements and praised the design requirements. As well as three dorm residents who all agreed and liked our design.
