

Original design

prioritized design

1. Our design requirements are to make a piece of art that incorporates motion from natural environment
2. Our priorities are making sure the piece fits perfectly in the space, making sure it is light enough to hang from the ceiling, and making sure it does not clutter the space. It should capture the natural light as well as the ceiling light. The piece should also be able to move from the wind and air conditioning in the lobby.
3. Our highest priorities are making sure the piece can hang from the ceiling, making sure it moves, and making sure it fits well in the staircase.
4. The rectangle rod we are using to hand the strings from will not be able to hold something over (___lbs)(we do not know the exact weight yet). The ceiling can also only hold a certain amount of weight. (we are waiting to hear back from facilities on this weight) The staircase is (_____) It it also must be light so it can move naturally. These are our highest priorities because one requirement of this project is creating something that moves and without the proper dimensions and weight the piece will not be able to stay hanging.
- 5.
6. Ms Selzer agreed with our design and requirement. Ms Busseys gave a few other locations we could put it in. Ms Selzer gave us more feedback on the actual design itself. Laser cutting the acrylic rather than glass cutting it. Using a specific string.
