

Below are our mockups and some of our initial designs:

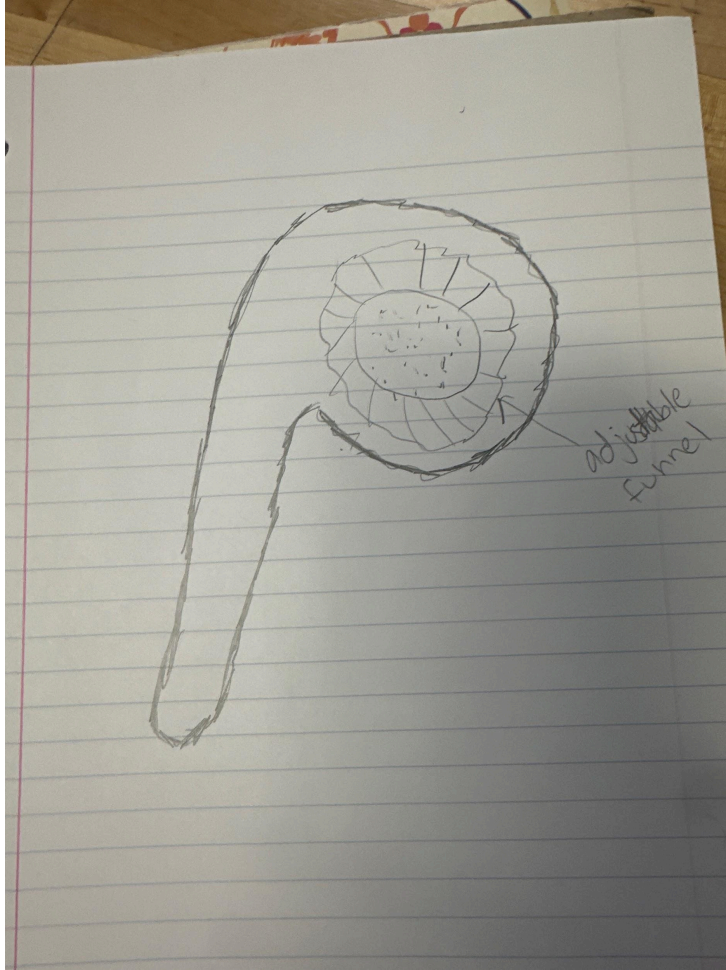

Date: 3/12/24

Description: This is a regular shower head with a silicon lining around it to act as a funnel so that no matter what the water always comes out of the same place.

Date: 3/12/24

Description: It is a regular shower head with the back that is "indented" so that the metal or main material is around the top.

Date: 3/12/24

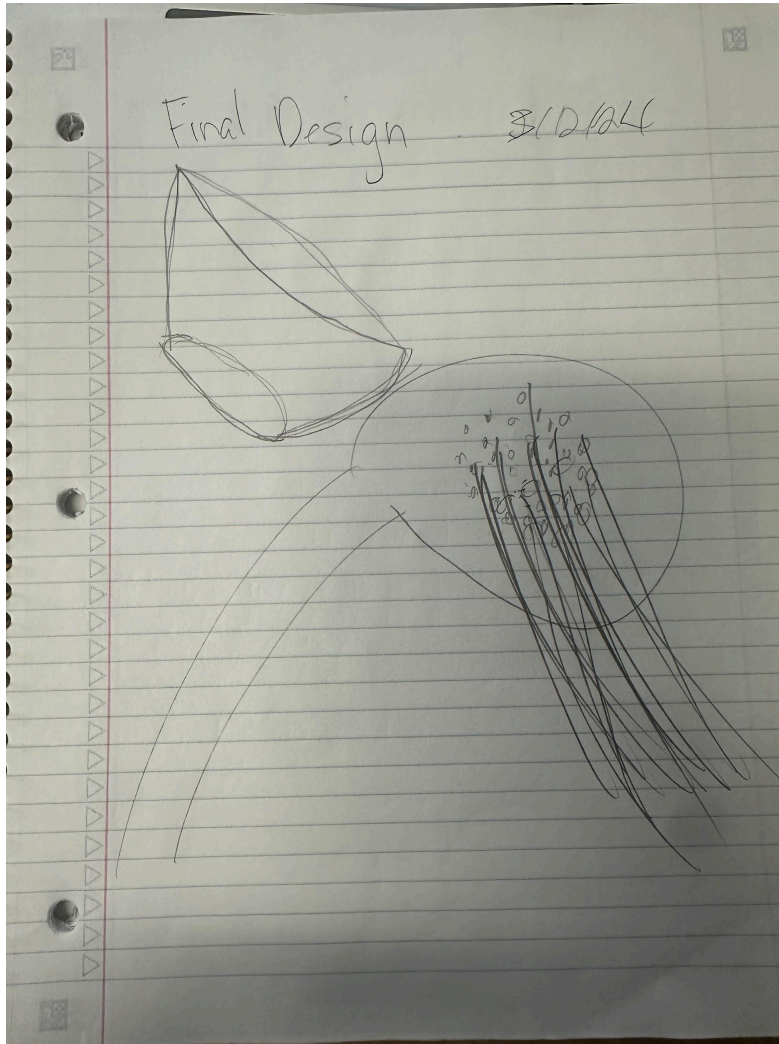

Description: It is a regular shower head with an adjustable funnel around it for water flow to go in the same place.

Below is our scoring chart we used when we had to figure out the “weight” of everything”:

	weight	Option 1	Option 2	Option 3	
efficiency	15	10	5	15	
durability	25	20	25	23	
cost	15	15	15	10	
installment	35	35	30	35	

size	10	10	10	10	
score	100	90	85	93	

After a lot of deliberation, we decided on:

Date: 3/12/24

This is the best design because it takes what works best out of each of ours and makes it into one. It has the adjustable cone, indented shower head, and has some sort of funnel to make the water go out one way.

This is our item list of the materials we needed:

Item	Cost each	# needed	Total
Shower head with rubber on the ends	\$50-\$100	1	\$50 for one specific one
Plastic cone	\$14.99	1	\$14.99
Velcro?	\$8.99	1	\$8.99
Some kind of rubber tape	\$4.87	1	\$4.87
Total cost			\$78.85
