

Element D: Design Concept Generation, Analysis, and Selection

Design Idea Generation

Name and where to put/store the micro bits.

Name: **Drake B**

Date: **3/6/24**

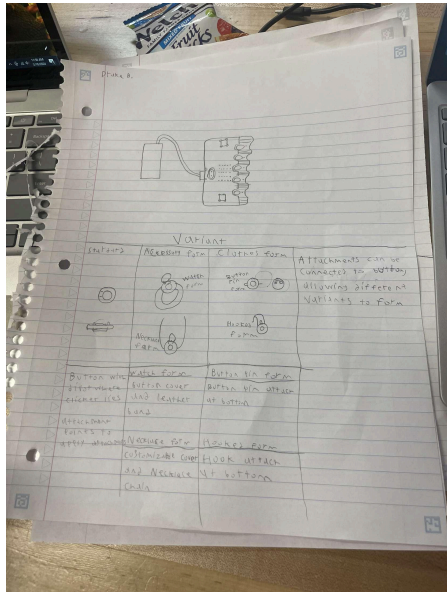

Design Idea #1 - Name: **“R.E.S.C.U.E.R.” (Remote Emergency System for Children’s Ultimate Rescue and Extraction)**

Description: “Introducing “RESCUER,” a cutting-edge tracking device meticulously crafted to safeguard children in perilous situations. This discreet yet powerful device seamlessly integrates into everyday items such as bracelets, watches, or clothing, serving as an inconspicuous guardian.

Encased in durable yet lightweight material, RESCUER is embedded within the child's clothing or accessories, ensuring it remains hidden from potential threats while remaining easily accessible to the child. Equipped with state-of-the-art GPS technology and real-time tracking capabilities, RESCUER instantly alerts authorities and designated caregivers in the event of a kidnapping or emergency.

With its panic button feature discreetly positioned for easy access, children can swiftly send distress signals, activating a rapid response from emergency services. The RESCUER prioritizes safety and discretion, offering unparalleled peace of mind to both parents and children alike.

Whether it's providing a lifeline in the face of danger or ensuring a swift and safe return home, RESCUER stands as a silent but vigilant protector, ready to spring into action at a moment's notice.”

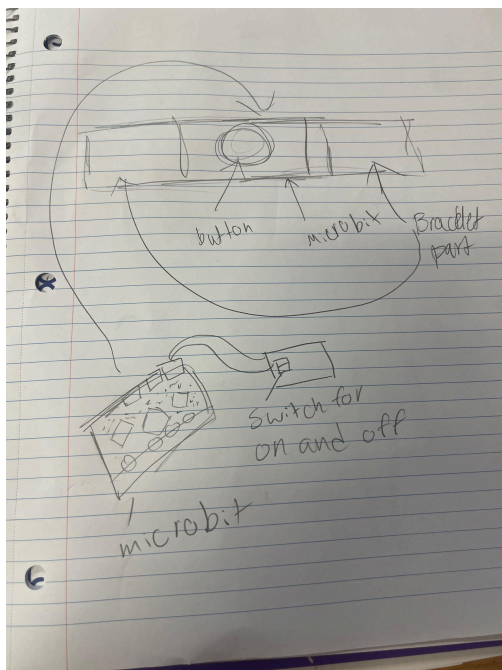

Name: **Quetzali**

Date: **3/6/24**

Design Idea #2 - Name: **"C.S.P. R." (Child Safety Proactive Response)**

Description: The "C.S.P.R" is a bracelet designed to send a distress signal to a parent who has another part of the bracelet. The C.S.P.R. has a button on the bracelet that a child can press in order to send this signal. The bracelet can have a variety of different patterns/colors that could fit their style and liking.

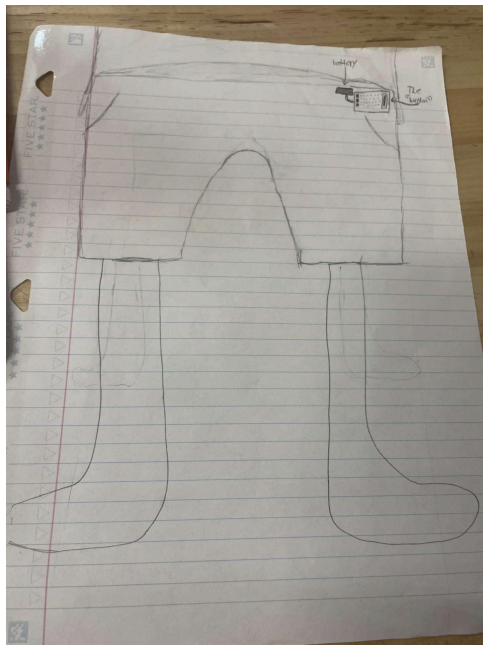

Name: **Bryson W**

Date: **3/6/2024**

Design Idea #3: Name - **"Button"**

Description: The "Button" is an anti-kidnapping button is a safety device that you can carry with you that attaches to your hip. It is designed to alert authorities or loved ones if you're in danger after you press the "Button" on your hip 3 times in a row in the matter of 3 seconds. this is so it doesn't go off randomly if you accidentally hit your side. The reason that it is on your hip/side is because. **1:** It is easy to reach and **2:** The kidnapper will more than likely not check the kids Hip in the matter of the time he/she gets kidnapped.

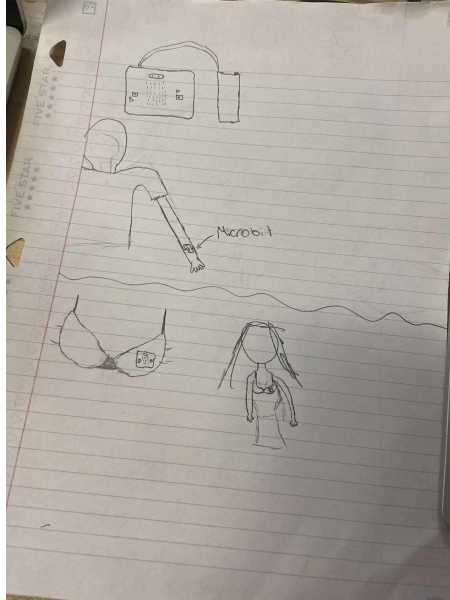

Name: **Lilly H**

Date: **3/11/24**

Design Idea #4 - Name: **"C.T. D" (Child Tracking Device)**

Description: With the help of Micro Bit, we have developed a device that tracks your child and notifies authorities when an emergency takes place. One device will be with the child and the other will be held with the police or emergency services. On the child's device, if in an emergency situation, the child will press and button on their micro bit. This micro device will be installed into a necklace or bracelet depending on what the child would like to wear. This way, the kidnapper wouldn't know they were wearing the device. On the child's device they can press a button to call the emergency services. If the child cannot talk, they can send an alert and the emergency services can display messages for the child to see or questions for them to answer

by pressing buttons. For example: the operator can send the message “ Are you in a car, press A for yes and B for no” and the child can respond by pressing the button. When the alert is sent, the emergency services automatically receive the child's live location, thus helping retrieve the /child and return them to safety.

Name: **Kaylee Overby**

Date: **3/11/2024**

Design Idea #5- Name: **“K.U.W. K” (Keep Up With your Kids)**

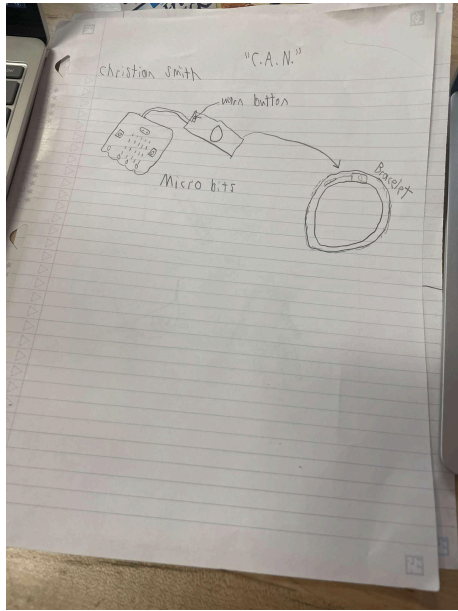

Description: With the Micro Bit, we have developed a device that tracks your child and notifies authorities when an emergency takes place. One device will be with the child and the other will be held with the police or emergency services and parents. On the child's device, if in an emergency situation, the child will press a button, or do the specific action that activates their micro bit. This micro device will be installed into an article of clothing or stuffed animal/toy, or jewelry; depending on what the child would like to wear. This is to help decrease the issue and solve the problem with kidnaping and keep your children safe and make sure you can keep up with them.

Name: **Christian Smith**

Date **3/11/2024**

Design Idea #6 - Name: **“C.A.N” (Child Anti Napper)**

Description: C.A.N is a micro bit that is developed to warn/notify parent(s) of the child. This is used when a child is in an emergency situation that could hurt or kill the child. It will be held somewhere on a child's clothing items.

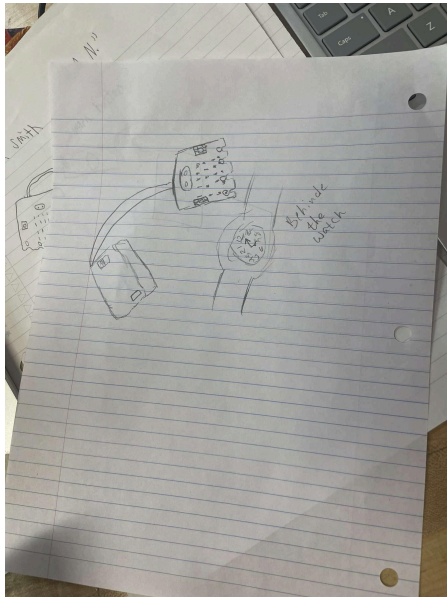

Name: **Xavier Bowen**

3/11/2024

Design Idea #7 -Name: **"K.P.T" (Kid Positive Tracker)**

Description: The K.P.T is a watch to track kids and alert their parents if they are in a bad situation and parents can track them by looking at their phone.

Final Design Idea-

Name: R.E.S.C.U.E.R (Remote Emergency System for Children's Ultimate Rescue and Extraction)

Description: With the help of Micro Bit, we have developed a device that tracks your child and notifies authorities when an emergency takes place. One device will be with the child and the other will be held with the police or emergency services. On the child's device, if in an emergency situation, the child will press a button on their micro bit. This micro device will be installed into a necklace or bracelet depending on what the child would like to wear. This way, the kidnapper wouldn't know they were wearing the device. On the child's device they can press a button to call the emergency services. If the child cannot talk, they can send an alert and the emergency services can display messages for the child to see or questions for them to answer by pressing buttons. For example: the operator can send the message "Are you in a car, press A for yes and B for no" and the child can respond by pressing the button. When the alert is sent, the emergency services automatically receive the child's live location, thus helping retrieve the child and return them to safety.

Store: One can be installed into a necklace, bracelet, or jewelry. The others can go to any authorities like the police or parents.

We took time to choose which name, description, and where to store it.
