

Element D: Design Concept Generation, Analysis, and Selection

Sandiyah Mannah - Design Idea #1

Description: A 3D window with a wooden frame, curtain dowel, and panels. It has a planter box on the bottom to make the window more interesting and allow extra storage space. It's thick enough to fit a light box and the backgrounds are interchangeable through a slit on the side. Extra backgrounds can be put into the storage space at the back of the window. There is also a curtain rod that curtains can be put on and interchanged. Finally there is a hole in the back to accommodate the cord for the lightbox.

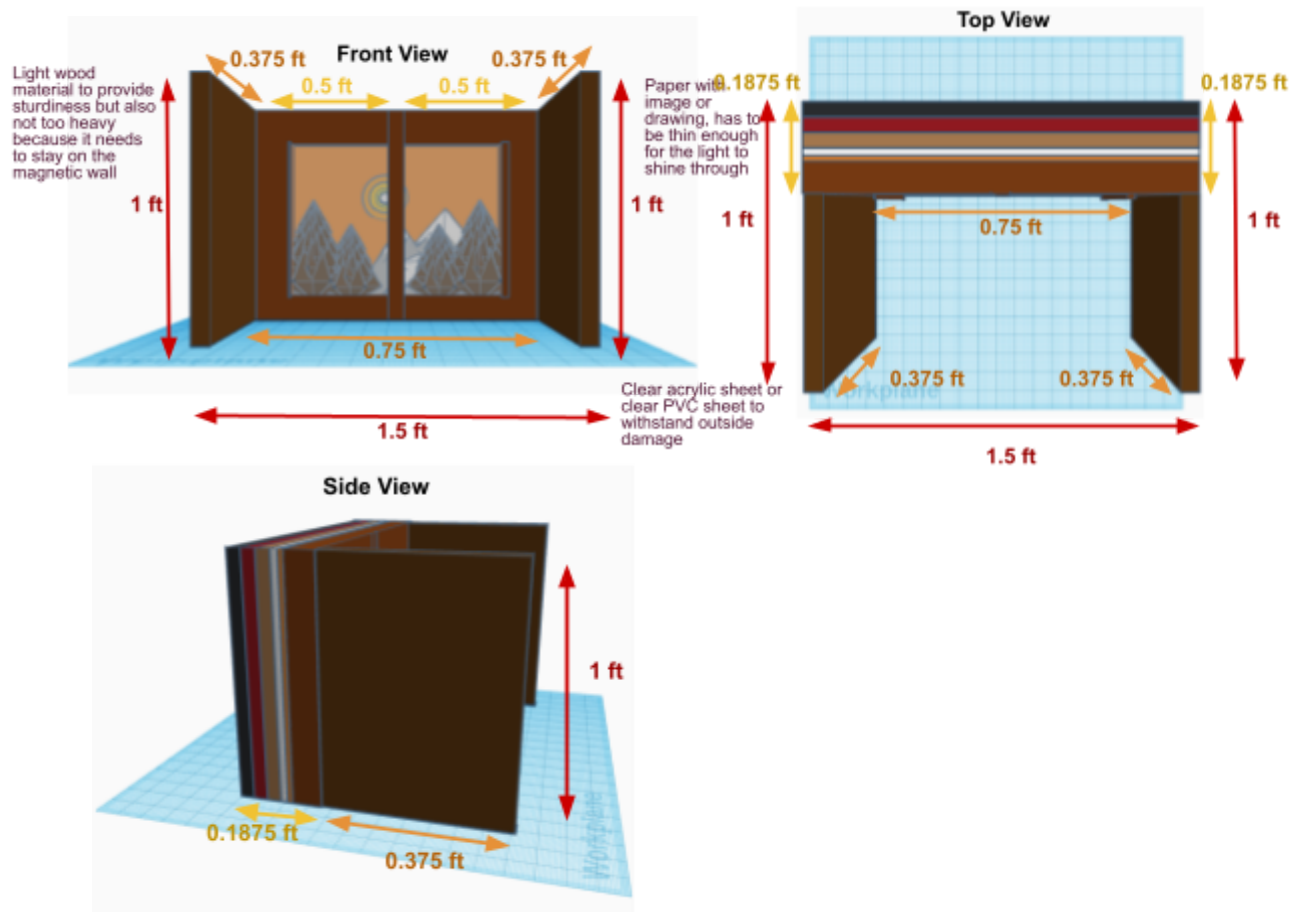

Drawing:

Marilyn Phan - Design Idea #2

Description: An indented window frame that is 1.5ft x 1ft with a picture of a photograph or drawing behind, with a light source such as LED or fairy lights at the back. It is covered with a clear sheet of acrylic or PVC, used as the “glass” to resemble the window more and provide protection to the inside components. At the very back of the entire frame, there are magnets attached to stick to the customer’s magnetic walls.

Drawing:

Vivian Nguyen- Design Idea #3

Description: A hollowed out box frame with a light box in the back. Glass or paper separates the background from the lightbox. 24x18in box frame with a 0.75 in wood piece down the middle. The glass in the front will either be acrylic or plexiglass.

Dimensions:

Height: 18 in

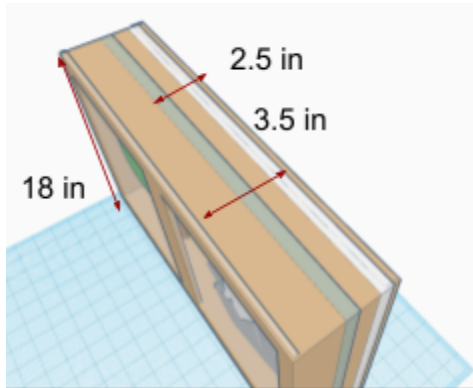

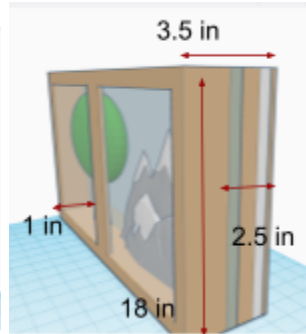

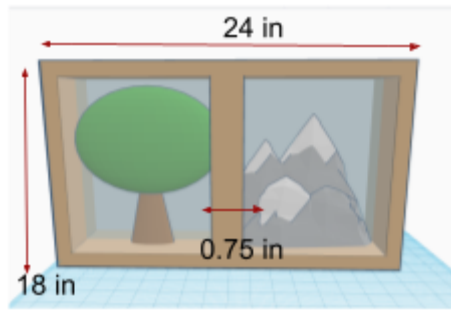

Length: 24 in

Width: 3.5 in

Lightbox width: 2.5 in

Background width: 1 in

Drawing:

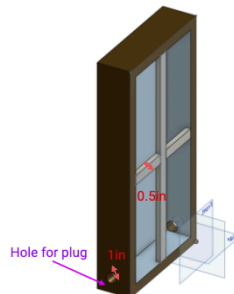

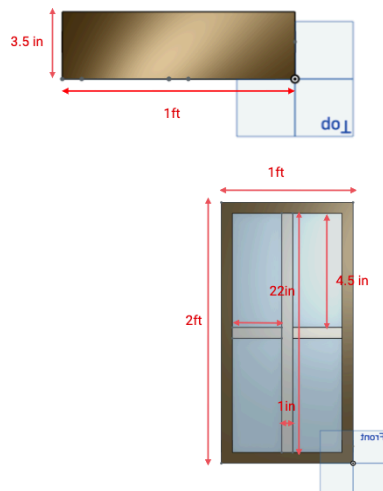

An Le - Design Idea #4

Description: A hollow window with a hole for plug to go through. The idea is to make a portrait and put it in the hollow frame during production. The light will be behind the portrait and the plug for it will escape through the holes on the side. In addition there will be magnets attached to the back of the window.

Drawing:

- Made out of wood
- In between panels are acrylic panels

Criteria	Weight	Sandiyah	Marilyn	Vivian	An
Repairability	5%	4	2	2	5
