

Element E: Application of STEM Principles and Practices:

Creativity: We are going to reuse an old fan to create a system to blow debris away from the cnc machine's cutting path.

Collaboration: Adam and I are working together to do research and design this system.

Critical Thinking: While we don't exactly need this it would be a great help and will ease the use of the cnc machine and will increase the precision of its cuts.

Communication: We are talking in person as we work together and will send an email when needed.
