

Element E:

Element E:

E1

Our design is supported by Physics. The movement of the shelves is a example of physics. Our design is also engineered by us and uses hinges to engineer the design. Math is used for the correct proportions to make sure not one dimension is too big or small.

E2

STEM is used to support our design solution because we used mathematics and physics in the construction of our shelves. We used mathematics for the measurements of the nodules to be thoughtfully placed in the wholes that are in the shelf supports. We use physics to help us twitch the strategic movemnts of the shelves on command.
