

Shower project

Team OH-J

Element E: Application of STEM Principles and Practices

In the boys dorms the dorm residents need a place to put their toiletries because there is not a built-in shelf in the communal showers and setting things on the floor is unsanitary. Solving the problem can help the dorm students place their toiletries somewhere without having to set it down on the ground. The problem is that there is nowhere to hang your shampoo and that leads to people putting it on the ground.

Measuring the size of the tool for fitting within the size requirements we can also use spatial reasoning to determine how high the shelf should be elevated off the floor can be used because to figure out your final solution we need to use math to find your dimensions. Stem can also be used when you are building because you have to apply your dimensions to the materials that you are using to build. Math can justify your final solution because math is applied to almost all parts of engineering.

The experts approved our design and gave us great feedback on our design. One expert said that we need to make sure it is out the way. Mr. S is qualified because he used to teach an engineering course and he also worked in submarines. Mr. S also knows a lot that goes with engineering which means that he will be able to give good tips and advice for our design.

Dr. H is an expert because she worked as a biology teacher and has a lot of good advice that comes with that field of study. She is also going to be able to see what the problem is and give ideas on how we can change our design to be better. Dr. H said that our design was good and that we can make it better by adding another slot just in case if the user wants to put another

toiletry inside.

The experts said that the idea was great and that what we are designing should fit right. We could add hooks to the caddy to hang off the wall so that it does not have to be screwed in. Another expert said that our design should not be in the way of the people taking a shower. The caddy should be in a spot where it is accessible to everyone and can be removed without struggle.
