

E

STEM Principle for High-Priority Design Requirement #1

STEM Concept: science

According to research it is more beneficial to have a short and pant option rather than having a dress

STEM Principle for High-Priority Design Requirement #2

STEM Concept: math

To sew and make a dress we had to measure the length from the cut area to the bottom of the original dress also we had to measure the area of the pocket to get it centered on the chest

STEM Principle for High-Priority Design Requirement #3

STEM Concept: technology

We used a sewing machine that pushes top thread into the fabric and loops it back out to bind the fabric together

STEM Principle for High-Priority Design Requirement #4

STEM Concept: engineering

Describe how the STEM concept applies directly to the specifics of your design: In order to come up with this plan we had to troubleshoot and brainstorm ideas that would fit the standards of gps. We also had to push surveys out to get people to agree with our plan

Proposed Solution to STEM Principles and Practices (E2)

STEM Principle for Design Solution #1

STEM Concept: science

Describe how STEM concept applies directly to the specifics of your solution: we had to find out if students actually wanted pants, we used surveys to find out what people preferred

STEM Principle for Design Solution #2

STEM Concept: math

Describe how the STEM concept applies directly to the specifics of your solution: We used dimensions to calculate the length to determine where we were going to cut the shirt, as a way to make the uniform comfortable for the students.

STEM Principle for Design Solution #3

STEM Concept: technology

Describe how the STEM concept applies directly to the specifics of your solution: we used a survey to determine if the students are happy with the uniform, or if they wanted an additional option. This helped us see if there was a need for an additional uniform option.

Evidence Design is Reviewed (E3)

Unfortunately we could not get feedback from a fashion expert due to our design process still being in the development stage
