

Element F: Consideration of Design Viability

- The hockey stick will be kept in the hole above where the persons legs will be, and the piece of pvc that the hockey stick is inside will be able to adjust to hit the puck better, and there's an adaptor on the main body of the device that can adjust the device to fit any wheelchair.
- The device is small and light enough to carry and fit into a car or closet for storage, it's easy to work as well
- *Adaptive floor hockey equipment - wheelchair hockey stick holder.* YouTube. (2020, November 10). <https://youtu.be/do-zZAKmh4c?si=w3eur7nfTIZtqRod>
- Some extra features that make our design better could be its adaptability to fit to any wheelchair and the ability to move around the hockey stick
