Element F: Consideration of Design Viability

Judgment about Design Viability (F1)

Use as many rows as needed. Remember, this chart below may help you organize your ideas, but you will need to execute the “credible evidence.”

Design Viability Description	Connection to Design Requirement	Credible Evidence?
The solution fits the car properly.	Our solution can fit the car with measurements.	We measured out the car console, and it fits a 12-inch by 8-inch by 6-inch model.
Our solution prioritizes the safety of the items inside.	The solution has sturdy materials that will last over time and break if necessary to protect the items held.	The materials are used for the same purpose of keeping items safe in transit in other solutions and are proven to work.
The driver isn't distracted while driving with our solution.	Does not interfere with the regular functions of the car or the driver's safety.	Our studies found that 90% of drivers have been distracted by items falling; having their items safe in our prototype will remove this fear and thus drivers will be less distracted.
