Nails	Made out of steel	Not purchased obtained from classroom	0\$	0\$	0\$
Tacky Glue	Different chemicals are put together to make sticky adhesive.	Not purchased obtained from classroom	0\$	0\$	0\$
Paint		Classroom	0\$	0\$	0\$

Our prototype will help us collect objective measurable data because we can see how much we need to increase the size of our final design. We would have to look at the way we built our prototype and go based on that to create our final design; this includes the opening at the top, the hole for the ball to pass through, and more. Despite not having the shooting/dispensing mechanism our prototype gave us a good perspective on what to do for our final product.

Construction of prototype (ELEMENT G)
