

	Details	Tools and Manufacturing Methods used
Step 1	Buy a showerhead	
Step 2	Take off the part with the nozzles	A cloth for stability and a wrench to unscrew solely the part we needed
Step 3	Look around inside and see where build up happens	Flashlight to look around and see where everything is
Step 4	Find the source of mold and see which method would best clean it	Either attach our solution, pod, or tablet. Or maybe even add a part to see if it works for cleaning within.
Step 5	Screw the cap back on and test	We decided to test using a solution through a small opening on the outside

	Details	Tools and Manufacturing Methods used
Step 1	After testing the liquid it just didn't run as smooth as we hoped	It was a mixture of vinegar and lemon juice which is acidic enough to get the build up but also non-toxic
Step 2	We kept the opening in the shower head and decided to try a tablet	The tablet was similar to this one off Amazon containing citric acid and sodium carbonate.
Step 3	The tablet would go through the same opening previously made.	The tablet would go in and water would run for about 20 minutes to ensure full dissolution.
Step 4		
Step 5		
Step 6		
Step 7		

Material name	Description	Where material was purchased	Cost per unit	# units	Total cost per item
Shower head made of plastic	It has a chrome finish and rubber nozzles	Lowes	19.98	1	19.98
Alka seltzer tablets	Has some of the materials we wanted	Walmart	10.47	1	10.47

Design Requirement	How will this prototype allow you to collect objective, measurable data?
Has to allow water to pass through	If we attach it to a water source, we can see if water goes through with the tablet
Has to work with the small opening	Water could go out of the opening in the top so also by connecting it to water, it could be tested.

Attribute	Description	Describe your prototype's functionality to test this attribute
Functionality	How well is it cleaned?	We can open the showerhead to see how much was cleaned

--	--	--

Attribute	Justification for why this attribute cannot be modeled or tested with your prototype
Durability	We cannot test to see how well it would work over a longer period of time
