

Element H: Prototype Testing and Data Collection Plan

For our project, we have a plan that has a strict rubric that shows us the requirements we need to meet for our project. For example, we needed to create a list of the plants we wanted the rain garden to have, including what types of plants, how many we need, and how much it costs.

These requirements will help make our project more successful and follow the rules surrounding our project and plan. This plan and requirements will help ensure our project effectively reduces flooding in the area. This will also help us know what plants we should use and what spacing is needed for them to work.
