Element H Initial Template

Element H: Prototype Testing and Data Collection Plan

Original Plan (pre-feedback)

Testing Details (H1, H2, H3, H4)

	requirement	testing setup and procedure	test cases and number of trials	expected range of results	pass/fail criteria, goal
1	The prototype must support an organizational method	1. Locate one roll of a specific type of filament 2. Continue to do this step until you have located one of each type or color of filament	a. Find one purple filament roll from 3 feet away b. Find one red filament roll from 3 feet away c. Find one gray filament roll from 3 feet away 5 trials	Prototype may: - Block a specific variety of filament from sight - Allow easy sight lines to all varieties of filament	Fail: >45 seconds to locate all three colors Pass: <45 seconds to locate all three colors Goal: Have all rolls be organized to allow for ease of location of all possible colors
2	The prototype must hold up to 200 spools of filament	1. Assemble all 200 rolls of filament 2. Stack the rolls filling the top shelf first 3. Once the top shelf falls put the remaining rolls on the horizontal pegs 4. If any rolls remain count up the	a. Stack all rolls onto pegs in specific order 5 trials	Prototype may: - Hold all rolls - Not hold all rolls	Fail: <200 rolls held Pass: 200 or more rolls held Goal: 200 rolls held

		amount leftover			
3	The prototype must allow easy access to all the types of filaments it holds	3. Grab one roll of a specific type of filament 4. Continue to do this step until you have collected one of each type or color of filament 5. If any variety of roll remains count the number of different varieties left after taking one roll per peg	d. Grab one purple filament roll e. Grab one red filament roll f. Grab one gray filament roll 5 trials	Prototype may: - Block in a specific variety of filament - Allow easy access to all varieties of filament	Fail: If a specific variety of filament is not accessible after removing one roll of filament prior Pass: If a specific variety of filament is accessible after removing one roll of filament prior Goal: Easy access to all varieties of filament

Feedback From Field Experts (H5)

Guidance to students about this section of Element H.

- a) "Field experts" are professionals who spend at least a portion of their time working in a field directly related to your project. These field experts are not permitted to double count as stakeholders.
- b) You must provide evidence in this section that your testing plan has been reviewed by 2-3 field experts.
- c) Do not incorporate their feedback in the table above. Rather, make a copy of the table in the section above, paste it into the section below, and make all revisions only in the table below. This provides evidence that you incorporated the feedback and shows your testing plan's progression.

Revised Testing Details That Incorporate Field Expert Feedback (H5)

Spring break interrupted, asked a field expert for evaluation later but not in time for the end of the unit.
