

We can get people to give feedback by hanging the piece in the art room, lab, or another place around campus. Students can give their feedback verbally or find another way of communication.

Another way we can test the art we made is by hanging it in different ways. We will have to hang the piece between the ceiling tiles in the FEW stairwell.

1. Gather string
2. Create a similar space/ environment where we would have to hang the final display
3. Measure and make sure it is similar to FEW stairwell ceiling tiles
4. Hang the frame from two metal bars/ or ceiling tiles to replicate how we would hang it in FEW
5. Tie the string on the frame first, then connect it to the chosen structure
6. Evaluate if the structure is able to stay, and doesn't fall
7. If it doesn't use a different hanging strategy
 - a. String
 - b. Metal wire
 - c. Chain
 - d.
8. Select which way the frame should be hung
9. Our testing plan will test if it is appealing to look at because we will be getting direct feedback from students.
10. It will also test if the mirrors are able to bring in more normal light because we will hang it by a window.
11. Hanging it up in this space will also give us a better idea on the best way to install it.
