Element C: Presentation and Justification of Solution Design Requirements

Design Requirement #1 (HIGH Priority)

Write out this design requirement in a single sentence, ensuring that it is clear, detailed, and measurable.

The product must solve the main problem identified in research within 5 minutes of use.

Explain how this design requirement directly ties to your prior research.

The research shows that users prefer fast and efficient solutions and get frustrated with long processes. This supports the need for a quick and effective design. Also shows that speed increases overall user satisfaction.

Share this design requirement with (a) primary stakeholder(s) to get their validation. Share any feedback, notes, and/or your revisions as evidence that you conducted primary stakeholder validation.

They said the solution should be fast and easy to use, so I should make sure the design is mainly on speed. I changed the design to lower the unnecessary steps.

Design Requirement #2 (HIGH Priority)

Write out this design requirement in a single sentence, ensuring that it is clear, detailed, and measurable.

It should be easy to use for people with no prior experience.

Name: _____

Date: _____

Class: _____

Explain how this design requirement directly ties to your prior research.

That most people are not experts and need simple instructions and a layout. This means the design must avoid being too complex. It also highlights the importance of having clear organization.

Share this design requirement with (a) primary stakeholder(s) to get their validation. Share any feedback, notes, and/or your revisions as evidence that you conducted primary stakeholder validation.

Feedback from people said that complicated designs would only confuse them, so we should simplify the process. I would put clear instructions based on their suggestions. I would have labels and guides so that they can have a better understanding.

Design Requirement #3 (HIGH Priority)

Write out this design requirement in a single sentence, ensuring that it is clear, detailed, and measurable.

It shouldn't be expensive, so everyone can buy it, likely under \$50

Explain how this design requirement directly ties to your prior research.

A main problem is cost because it can determine whether people will want to buy or use the product. Keeping the price low can increase the accessibility to many others.

Share this design requirement with (a) primary stakeholder(s) to get their validation. Share any feedback, notes, and/or your revisions as evidence that you conducted primary stakeholder validation.

Stakeholders said they would not pay a high price, so I adjusted materials/features to stay low-cost. I would remove unnecessary features to meet the budget. I also compared prices of similar products to stay reasonable.

Design Requirement #4 (HIGH Priority)

Write out this design requirement in a single sentence, ensuring that it is clear, detailed, and measurable.

It should be safe, that has no risk for harm.

Name: _____

Date: _____

Class: _____

Explain how this design requirement directly ties to your prior research.

Safety concerns are always there, especially for younger users. This means that safety has to be a top priority. It can also reduce liability and build trust.

Share this design requirement with (a) primary stakeholder(s) to get their validation. Share any feedback, notes, and/or your revisions as evidence that you conducted primary stakeholder validation.

Stakeholders emphasized safety as very important, so I added safety features and limitations so no one would get hurt. I also tested the design to reduce possible risks. Durability increases the overall value. It also reduced the need for replacements.

Design Requirement #5 (HIGH Priority)

Write out this design requirement in a single sentence, ensuring that it is clear, detailed, and measurable.

The design should be able to last a year and be durable.

Explain how this design requirement directly ties to your prior research.

Research showed the people want long-lasting products that would still hold value. The durability of it could increase the overall value.

Share this design requirement with (a) primary stakeholder(s) to get their validation. Share any feedback, notes, and/or your revisions as evidence that you conducted primary stakeholder validation.

Users said they don't want something that breaks easily, so I chose stronger materials. I should also focus on reinforcing key parts of the design. Users still prefer something that looks good. A better design can attract more users.

Design Requirement #6 (LOW Priority)

Write out this design requirement in a single sentence, ensuring that it is clear, detailed, and measurable.

The product should have a modern and visually appealing design.

Explain how this design requirement directly ties to your prior research.

Name: _____

Date: _____

Class: _____

Research showed that the appearance does matter, but it is less important than it's function. But a really good design can attract more users.

Share this design requirement with (a) primary stakeholder(s) to get their validation. Share any feedback, notes, and/or your revisions as evidence that you conducted primary stakeholder validation.

Stakeholders said design is nice but not necessary, so this would be a lower priority. I made small visual improvements without increasing cost. I kept the design simple while still making it look appealing.

Design Requirement #7 (LOW Priority)

Write out this design requirement in a single sentence, ensuring that it is clear, detailed, and measurable.

The product could have extra features.

Explain how this design requirement directly ties to your prior research.

Some users like personalization, but it is not essential. Some users like it to be more personal, but it is not essential. It can improve the user satisfaction. It can help the person use the product to their needs.

Share this design requirement with (a) primary stakeholder(s) to get their validation. Share any feedback, notes, and/or your revisions as evidence that you conducted primary stakeholder validation.

From the research it showed that the customization was more like a bonus, because of that it's not a need, so it was ranked lower. I included limited options to keep it simple. I avoided adding too many features that could make the design too complicated.
