

Our stakeholders asked for a 90% cut of all profits generated from the vending machine. With that, they never mentioned any frustrations, only plans to move forward effectively and precisely. However, they did mention that some features they wanted were that they wanted a good placement for the machine to maximize profit.

In our research, it showed that vending machines are usually commonplace in other high schools. At our school, there is also a high demand for a vending machine to be placed. For this, things that failed in previous attempts is that there wasn't much determination behind the want for the implementations, which is usually in part of administration not caring too much. Primarily, our budget is not a problem, considering our company is offering to install the machines for free, and restock them for free. Time is not necessarily an issue, however we could be more cordial in completing log work and classwork. Materials, or snacks in the vending machine, will be limited to what the company can provide. For the safekeeping of the lunch staff, the machine will only be open for lunch periods only. For this reason, school rules will have to be applied to prevent any student attempting to access the machine outside of designated lunch periods. And as always, installation concerns are left up to the company and where they install the machine.

We will measure our success by:

- Students will be able to access the machine at acceptable times
- Students and satisfied by the snacks present in the machine
- The school reaps acceptable benefits to be used for ACE programs from the machine
- The snacks are affordable for all

These 4 core factors are critical while considering the effectiveness of our project, as they point out necessary figures in the acceptability and integration of the machine into DCI. Based on stakeholder interviews, they require a majority of the sum from the vending machine to be given to them. In return, there is free restock and installation of the machine in the school. This helps measure the success of this project because the school itself will not have to pay a dime for something students have wanted for years.
