

High Priorities:

1. Must be no longer than 5 ft, no thicker than 1ft, no longer than 3ft.

- **What it needs to do:** Meet the exact length requirements that are a good size for the stakeholders.
- **Why it's important:** It is important not to exceed the materials and make the project too big and bulky.
- **Stakeholder input:**

2. Finished task with 100% accuracy of stakeholders' wants and needs.

- **What it needs to do:** Meet mostly exactly how the stakeholders wants and needs the project to be, however, our input will be a large impact.
- **Why it's important:** It is important to match what the stakeholder wants because they are the ones helping and using this project. (W., Samantha, 2024)
- **Stakeholder input:**

3. Under \$50 for the budget.

- **What it needs to do:** Needs to be cheap and easy to fix/replace if broken or damaged.
- **Why it's important:** It is important because if it is damaged, the school or other students won't want to spend a lot of money to fix or replace it.
- **Stakeholder input:**

4. Temp placement on the map must be 100% accurate.

- **What it needs to do:** Needs to be able to direct people to the right locations without confusion or incorrect information.
- **Why it's important:** It is important because if the temps are in different/wrong places or too far or close together, students, teachers, and visitors could get confused, and the map wouldn't be as helpful. (Mathieu, 2025).
- **Stakeholder input:**

5. Must also be stable and weather-resistant enough to last for years.

- **What it needs to do:** It needs to be able to last for years without getting damaged, either by weather, humans, or other possible issues that could arise.
- **Why it's important:** Even after we leave, it will still be necessary for the temp layout. Until the layout of the temps is changed or altered, it will be relevant.
- **Stakeholder input:**

6. Must be easy to understand, QR code must be fully functional.

- **What it needs to do:** Show which teachers are in which temps and what classes they teach.
- **Why it's important:** It is important to provide a list of teachers for each temp, so if stakeholders are confused with the map they can find the teachers' temp number and then find their temps.
- **Stakeholder input:**

Low Priorities:

1. Must be painted with at least 4 colors.

- **What it needs to do:** Provide artistic and appealing values, as well as being eye-catching for users.
- **Why it's important:** It is important to give stakeholders and others a visually appealing view as they utilize the project.
- **Stakeholder input:**

2. Must have a satisfactory design.

- **What it needs to do:** Provide stakeholders and others with a statement design to be more entitled to use the design.
- **Why it's important:** Research shows that appealing visuals or designs on signs tend to make users pay more attention and build interest in the sign (Hyland, 2026).
- **Stakeholder input:**

3. Must be coated 100% in resin to protect from weather.

- **What it needs to do:** Needs to be able to last years outside and not rot or be damaged because of the weather.
- **Why it's important:** It is important because if the map is not weather-proof, the wood will rot and the map will become destroyed over time, and will need replacement, which takes lots of time and resources.
- **Stakeholder input:**

4. Must be plywood, pine, or oak.

- **What it needs to do:** Needs to be cheap but also strong and reliable in outside conditions.
- **Why it's important:** It is important because other wood materials can be expensive and hard to obtain, while plywood, pine, and oak are all cheap, easy to obtain, and reliable materials.
- **Stakeholder input:**

5. The website attached to the QR code must be consistently accurate.

- **What it needs to do:** Needs to be able to keep track of changes and update differences made in the future, even after we graduate.
- **Why it's important:** It is important because having outdated information would disregard the point of the project as a whole. Research states that QR codes are a more easy and efficient way to access information (Paypal, 2023).
- **Stakeholder input:**
