Element C Initial Template

Element C: Presentation and Justification of Solution Design Requirements

Design Requirement #1 (HIGH Priority)

The design requirement is to ensure students are not on their phones during class. Administration does not want students to be distracted on their phones, and instead use time wisely to study/focus, and its also distracting to other students in class.

Design Requirement #2 (HIGH Priority)

Ensure students are not on their phones outside of class during free periods or lunch times Teachers are concerned with frequent phone use as they're the ones who need to maintain a focused academic environment especially during non-class hours. Trying to supply order and structure to the school while balancing student "well-being" with enforcing policies to support academic success for students

Design Requirement #3 (HIGH Priority)

Students should be bonding with each other during free time. Students are absorbed individually on their phones, and friendships in school are important and students should find a study buddy

Design Requirement #4 (HIGH Priority)

All students should/must secure their phones in a school-managed location and should be kept there from the start of the school-day until dismissal. Our prior research on school cellphone bans shows that partial restrictions are less effective because students will continue to access their phones during free time, lunch, and bathroom breaks. Clear and consistent school policies without loopholes will help with student compliance.
