MyDesign Portfolio

Element C Initial Template

Element C: Presentation and Justification of Solution Design Requirements

Design Requirement #1 (**High Priority- Safety**)

Write out this design requirement in a single sentence, ensuring that it is clear, detailed, and measurable. **Safety is the most important because you don't want them to have non-toxic materials that make them sick and you also want them to have a secure home so they feel safe. There also needs to be no sharp edges in the cage so they can't cut themselves.**

Explain how this design requirement directly ties to your prior research. **It shows that we have researched many things about what is toxic and what isn't toxic to rabbits because we want our rabbits to have a nice and safe home. We also have found materials that are non-toxic that don't have sharp edges.**

Share this design requirement with (a) primary stakeholder(s) to get their validation. Share any feedback, notes, and/or your revisions as evidence that you conducted primary stakeholder validation.

Design Requirement #2 (**High Priority- Entertainment**)

Write out this design requirement in a single sentence, ensuring that it is clear, detailed, and measurable. **Entertainment also matters a lot because you don't want your rabbit just sitting around all day doing nothing, they need something to entertain them.**

Explain how this design requirement directly ties to your prior research. **The research we have done shows that we need the rabbits to have entertainment like having a tunnel in their home or something like a hamster wheel, but the rabbits are able to fit on it.**

Share this design requirement with (a) primary stakeholder(s) to get their validation. Share any feedback, notes, and/or your revisions as evidence that you conducted primary stakeholder validation.

Class: _____

Design Requirement #3 (High Priority- Transport Easily)

Write out this design requirement in a single sentence, ensuring that it is clear, detailed, and measurable. Being able to transport easily is very important because if you ever had to leave your home for a long period of time you need to be able to take your rabbit and its cage with you if no one else can take care of it while you're gone.

Explain how this design requirement directly ties to your prior research. Having a rabbit home that is portable with the accessories needed like a handle and light weight material so they're easy to carry, but also at the same time making sure it is protective.

Share this design requirement with (a) primary stakeholder(s) to get their validation. Share any feedback, notes, and/or your revisions as evidence that you conducted primary stakeholder validation.

Design Requirement #4 (High Priority- Comfort)

Write out this design requirement in a single sentence, ensuring that it is clear, detailed, and measurable. Comfort is a big role in the rabbit cages because you don't want your rabbits to be uncomfortable because if they aren't comfortable then they can't get a good rest.

Explain how this design requirement directly ties to your prior research. A rabbit home that is comfortable for them needs to have a small bed and a small blanket for them to lay on so they want to get cold and they can sleep better.

Share this design requirement with (a) primary stakeholder(s) to get their validation. Share any feedback, notes, and/or your revisions as evidence that you conducted primary stakeholder validation.

Design Requirement #5 (High Priority- Durability)

Write out this design requirement in a single sentence, ensuring that it is clear, detailed, and measurable. When you build a rabbit cage you want it to last a long time and not fall apart easily.

Explain how this design requirement directly ties to your prior research. This ties to my research because we have looked for a material that is strong and doesn't decay fast, so the cage will be secure and last a long time.

Name: _____

Date: _____

Class: _____

Share this design requirement with (a) primary stakeholder(s) to get their validation. Share any feedback, notes, and/or your revisions as evidence that you conducted primary stakeholder validation.

Design Requirement #6 (**Low Priority- Easy Access**)

Write out this design requirement in a single sentence, ensuring that it is clear, detailed, and measurable. **Getting easy access to the rabbits for check ins, taking them out for visitors, and being able to see them.**

Explain how this design requirement directly ties to your prior research. **From our research, when rabbits are sick they may hide, so it is important to be able to see and be able to pick them up to check on them. The visitors at the center may also want easier and better observation of the rabbits, as they tend to hide when they are scared.**

Share this design requirement with (a) primary stakeholder(s) to get their validation. Share any feedback, notes, and/or your revisions as evidence that you conducted primary stakeholder validation.

Design Requirement #7 (**Low Priority- Appearance**)

Write out this design requirement in a single sentence, ensuring that it is clear, detailed, and measurable. **How the hideout looks, if it has any decorations, colors, the look of the materials, etc. to make it more appealing for visitors and the area it is in, could also be affected by the quality.**

Explain how this design requirement directly ties to your prior research. **Based on our information from the wildlife center, there are workers and visitors that would most likely have a better opinion on their care if the hideout is presentable, especially if it looks quality or not.**

Share this design requirement with (a) primary stakeholder(s) to get their validation. Share any feedback, notes, and/or your revisions as evidence that you conducted primary stakeholder validation.
