

Element C: Presentation & Justification of Solution Design Requirements

Design Requirement #1 (HIGH Priority), Weight: 30%

The first design requirement is that the design must be at most 11x16 inches, which is the most space we get on the librarian's desk. Any bigger, and there is a risk it will fall.

Design Requirement #2 (HIGH Priority), Weight: 10%

Requirement 2 is that it should be made out of plastic. Materials, such as glass, cannot be used as, for example, if something breaks, then the students could be hurt or harmed.

Design Requirement #3 (HIGH Priority), Weight: 10%

Requirement 3 is that it cannot have small jars to fit the pieces as there are many students in the school. Small jars will leave it too overflow/constant need to empty it.

Design Requirement #4 (HIGH Priority), Weight: 20%

Another requirement is that it should be made in 1 piece. Too many pieces will result in students messing or knocking over things.

Design Requirement #5 (HIGH Priority), Weight: 20%

Besides it not having to have small jars, it should have containers that can fit many pom poms (our choice of piece) for every student in the school and also leave space for more.

Design Requirement #6 (LOW Priority), Weight: 10%

The project should be able to properly sit on the librarians desk so students can put pompoms in.

Design Requirement #7 (LOW Priority)

The final design requirement is that the product should exist as an ice-breaker for students to interact with in a library. This is important because this is what the librarian asked for.
