Class: _____

MyDesign Portfolio

Element C Initial Template

The requirements from Element C will be used for Elements D, E, F, and H.

Element C: Presentation and Justification of Solution Design Requirements

Design Requirement #1 (HIGH Priority)

Create a system that can distribute passes to students in any way.

This is the bare minimum to meet the requirements; it is the most important, stemming from prior research.

The design requirement was _____ approved _____ (approved/ unapproved) by the stakeholder

Design Requirement #2 (HIGH Priority)

The basic setup has a timer that is able to record for how long each pass is issued.

Name: _____

Date: _____

Class: _____

This ties in with the stakeholder, as a timer system is not required, but is still incredibly important for the entire system to meet its goal

The design requirement was _____ approved _____ (approved/ unapproved) by the stakeholder.

Design Requirement #3 (HIGH Priority)

The design is able to track the locations of the passes, thus tracking the students around the building.

The cornerstone of the entire design, and it one of the 2 most important parts that are the most important to add according to the stakeholders.

The design requirement was _____ approved _____ (approved/ unapproved) by the stakeholder.

Name: _____

Date: _____

Class: _____

Design Requirement #4 (HIGH Priority)

The system is organized and is easy to use, by both the teachers and students.

Very important due to the importance of proper usage of the system. Meaning that the design must be simple and run well.

The design requirement was _____ approved _____ (approved/ unapproved) by the stakeholder.

Design Requirement #5 (HIGH Priority)

The overall design is cheap and easy to setup in any location.

This is the primary reason why this device is being created of the research acquired. Most other devices of this level are expensive to set up, make, or to maintain.

Name: _____

Date: _____

Class: _____

The design requirement was _____ approved _____ (approved/ unapproved) by the stakeholder.

Design Requirement #6 (LOW Priority)

The device has a physical element to it, allowing it be modified in person by a technician.

This is not as important as stated by the stakeholder. This will make the device easier to use and cheaper to maintain.

The design requirement was _____ approved _____ (approved/ unapproved) by the stakeholder.

Design Requirement #7 (LOW Priority)

The prototype is able to do small hyperspecific things such as tracking the amount of passes taken is a certain amount of days or something along those lines.

Name: _____

Date: _____

Class: _____

Low priority by the stakeholder due to this being extra things that the prototype could do, but is not required to.

The design requirement was _____ approved _____ (approved/ unapproved) by the stakeholder.

Rubric

Element C: Presentation and Justification of Solution Design Requirements						
C1. Determination of design requirements. _____ design requirements are related to prior research.	score = 5	score = 4	score = 3	score = 2	score = 1	score = 0
	80%-100% of	60%-79% of	40%-59% of	20%-39% of	1%-19% of	No
C2. Requirements list. Design requirements _____.	score = 5	score = 4	score = 3	score = 2	score = 1	score = 0
	are listed, prioritized, clear, and detailed	are listed, prioritized, generally clear, and detailed	are listed, prioritized, generally clear, and somewhat detailed	are listed and prioritized, but some or all may be incomplete and/or lack specificity	are listed, formatted, and prioritized, but these may be partial or overly general	are not present or are too vague
C3. Quantity of high-priority design	score = 5	score = 4	score = 3	score = 2	score = 1	score = 0

Name: _____

Date: _____

Class: _____

requirements. _____ of the design requirements listed are identified as high priority.	Five	Four	Three	Two	One	None
	score = 5	score = 4	score = 3	score = 2	score = 1	score = 0
C4. Objective & measurable. Design requirements _____. are consistently objective and measurable	are nearly always objective and measurable	are generally objective and measurable	may be only sometimes objective and/or measurable	are insufficiently measurable	are not measurable	
	score = 5	score = 4	score = 3	score = 2	score = 1	score = 0
C5. Leading to a solution. Design requirements _____. would be highly likely to lead to a tangible and viable problem solution	would be likely to lead to a tangible and viable problem solution	has the potential to lead to a tangible and viable problem solution	has some potential to lead to a tangible and viable problem solution	have little potential to lead to a tangible and viable problem solution	cannot lead to a tangible and viable problem solution	
	score = 5	score = 4	score = 3	score = 2	score = 1	score = 0
C6. Primary stakeholder validation. There is evidence that requirements represent the needs of, and have been validated by, _____ primary stakeholder groups.	80%-100% of	60%-79% of	40%-59% of	20%-39% of	1%-19% of	No primary stakeholder groups.
