Element C Initial Template - AT - 18 points

Element C: Presentation and Justification of Solution Design Requirements

Design Requirement #1 (HIGH Priority)

Safety lines with bollards

Our design requirement is to make it so there are lines on the road to prioritize the bike lanes that include bollards to keep the bikers safe.

The design requirement was Bollards (**approved**/ unapproved) by the stakeholder. (If unapproved, describe how you will reword the requirement so the stakeholder approves.) Josh's neighbor said that he really likes the idea of bollards.

Design Requirement #2 (HIGH Priority)

Wider bike lanes on the road.

In element B there was a picture of wide bike lanes and they were perfect width.

Name: _____

Date: _____

Class: _____

The design requirement was wide bike lanes (**approved**/ unapproved) by the stakeholder. (If unapproved, describe how you will reword the requirement so the stakeholder approves.)

Dr sbur approved of this requirement saying this was one of our stronger ideas.

Design Requirement #3 (HIGH Priority)

Circling back to the buffers but making them bigger 5 feet wide and 3 feet tall separating cyclists from traffic.

Coming back from element a research showing the wide lanes barriers help with cyclist not getting injured

The design requirement was wider buffers (**approved**/ unapproved) by the stakeholder. (If unapproved, describe how you will reword the requirement so the stakeholder approves.)

Dr. sbar said he approves this requirement because it could prevent a lot of physical damage.

Design Requirement #4 (HIGH Priority)

The bike lanes must include bright reflective paint and LED lighting placed 30 feet apart; this really helps at night time.

Element A talked about using bright lights on the road to help at night but that would distract drivers so it was changed to paint bright so it could be seen at night to show where the bike lanes are.

The design requirement was reflective paint or led (approved/ unapproved) by the stakeholder. (If unapproved, describe how you will reword the requirement so the stakeholder approves.)
Josh's neighbor approved and liked lighting and it would help in the winter when it starts getting dark earlier.

Design Requirement #5 (HIGH Priority)

Install clear signage every 100 feet and at every intersection

Name: _____

Date: _____

Class: _____

confusion between drivers and cyclists often leads to near-collisions.

The design requirement was install clear sinage (approved/ unapproved) by the stakeholder. (If unapproved, describe how you will reword the requirement so the stakeholder approves.)

Josh's neighbor approved this he said "signs make it clear who belongs where."

Design Requirement #6 (LOW Priority)

Add small planters or greenery strips along the outer edge of the bike lane

Bike lanes increase community acceptance. Josh's neighbor mentioned wanting the lanes to "look nice and not just like more road paint." Ryan king also agreed with this

The design requirement was add small planters (approved/ unapproved) by the stakeholder. (If unapproved, describe how you will reword the requirement so the stakeholder approves.)

Joshs neighbor approves and we thought it was good just to be nice looking and have

Name: _____

Date: _____

Class: _____

more people want to bike if the lanes look nice.

Design Requirement #7 (LOW Priority)

Add safety information signs just to tell bikers stay in their lane and wear helmets

concern for cyclist health and safety habits. In discussions, he mentioned many injuries could be avoided with "basic helmet use and awareness reminders."

The design requirement was Add safety signs (**approved**/ unapproved) by the stakeholder. (If unapproved, describe how you will reword the requirement so the stakeholder approves.)
Dr. Sbur approved the requirement as a great adjustment and just improves overall biker safety.
