

As we have certain requirements to meet, we would also need ideas of how to meet all the requirements while making them realistic to achieve in our time period.

First, in terms of aesthetics, we would want to add different types of flowers.

- They are going to be blue and white, as part of the representational side of DCI.
- The flowers would be placed on the top half, the semicircle, where insects and pollinators would be able to arrive.
  - This also targets the eco-friendly part/requirement of our plan.

Then, we would have certain slabs to spell out DCI. These slabs, we plan to have painted by the art class of Mr Colburn. Starting with his French class as a test subject to see how well the project idea is received, and then moving on to the other classes.

- This is a good way to involve our community and have them be a part of the renewal. Also, this is a good way for students to express themselves.

We were going to do bird feeders for a more eco-friendly solution, but we probably won't have time to install them, as we need to build the benches and finish doing the slabs (painting and placement). The benches would be added on opposite corners of the area, surrounded by flowers and the rest of the slabs leading to them.

Lastly, we would want to have the pathway, with a desirable walking pace, for students to be able to go through the flowers without stepping on them.
