MyDesign Portfolio

Element D Initial Template

Design Idea #1

Date: 2/18/26

Description: My design for the rabbit enclosure supports the requirements of allowing the rabbits safe materials/toys for chewing, also allowing collapsible design that is easy to move. It also allows moveable ramps and isolation for the smaller rabbit. This design is made so that the rabbits have dark spaces while also allowing the rabbits to be seen 24/7 from all angles. The design allows easy cleaning access and a door on top that is easy to be opened for access to the smaller rabbit. The design also shows many parts that give the rabbit snacks but they must be limited.

Design Idea #2

Date: 2/20/26

Description: This design shows that the rabbits have dark spaces and allows them to be seen if they are in the hiding spot. The rabbits also have a litter box which the litter in the box is toxic so we have replaced it with a non-toxic requirement. The rabbits also have a tunnel for them to play. This design meets requirements and also allows them to snack on their food and water and they have a hay basket they can be switched out by different treats.

Design Idea #3

Date: 2/18/26

Description: this design supports the requirements of safe materials allowing you to see the rabbits at all time and also get to them and is easy to transport and to clean. This design is a two story 90 degree corner design with a multi room layout. The top floor will have 3-4 rooms, one room with a smaller round door so only one bunny can get through it. A room with a tunnel, a room with toys hanging from the ceiling. A ceiling cut out allowing them to climb or peek out of the top. On the bottom floor there are also 3-4 rooms, a toy room, a second tunnel room and a room with nothing in it. There will be ramps to connect the levels and windows that open throughout so you can see them and get to them at all times. There will be built in hay pockets that connect to the outside for easy refilling. Each piece will be detachable and the big pieces will have handles so it can be easily moved.

Manufacturing Methods:

Step 1: measuring/cutting materials

Step 2: assembling/building prototype

Step 3: testing/adjusting

Supply List and Costs:

Item	Cost each	# needed	Total
bamboo	free	Couple trees	\$0
Untreated wood	free	Good size plates	\$0
Big screws	\$15	2 boxes	\$30
Little screws	\$8	2 boxes	\$16
twine	\$11	150 feet	\$11
Plastic sheet	free	One piece	\$0
Total Cost	\$34.00		\$57.00
