

Kayden's Structure

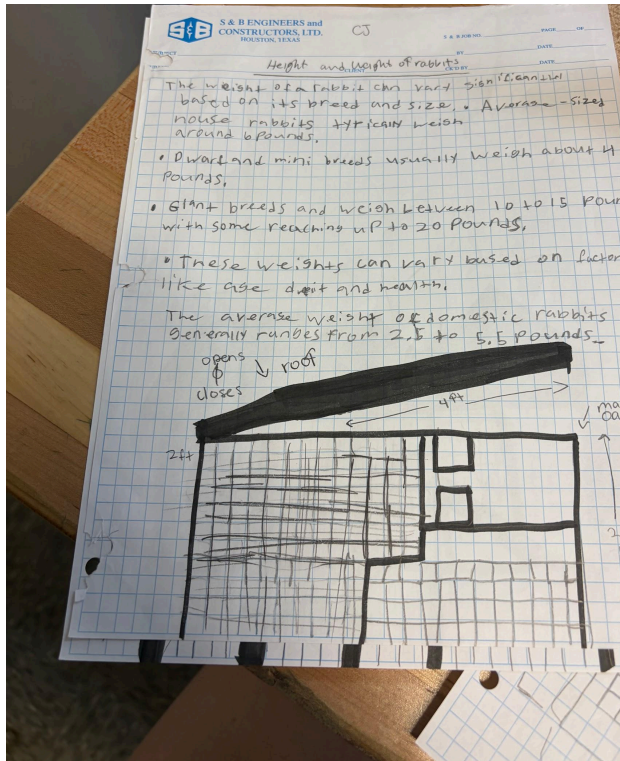

My rabbit design structure is a two story structure so that the rabbits have enough space to run around and enough space to have activity. My structure will be built with bamboo and the little window spaces will be filled by chicken wire. The structure will be 3.5 feet tall and 4 feet wide with the bottom part being 2 feet and the top part being 1.5 feet. The roof part is in a triangular like shape and each side is 1 foot long. There will be a ramp that lets the rabbits have access to the top part of the structure.

Fian's Structure

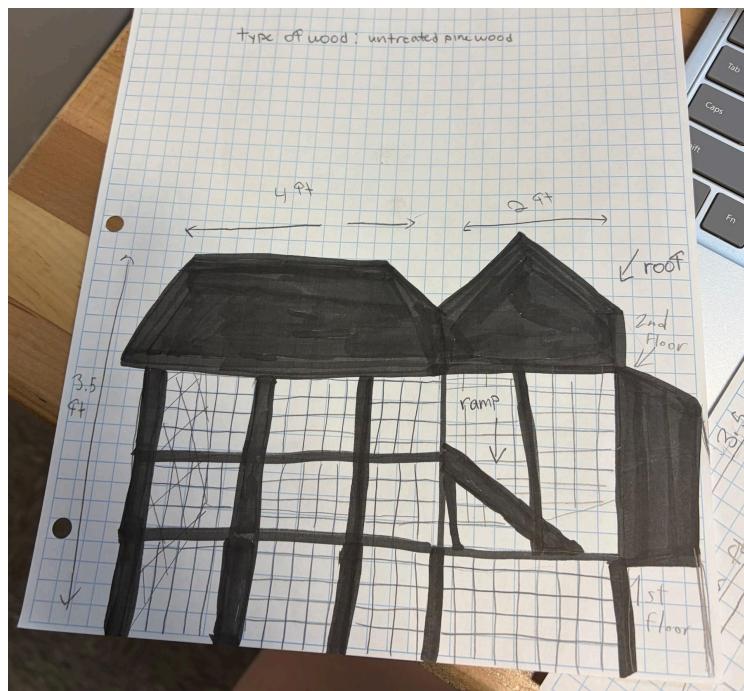

My rabbit hutch has 4 legs that are a foot long and its shape is like a rectangle that is 6 feet long with a length of 2.5 feet. It will have a door that goes up and down and it will have a roof that is thick so rain wouldn't get inside. I wanna use untreated pine wood for the structure and some chicken wires connected to it.

Christian's Structure

My structure has got a 4 foot wide roof that opens and closes so that workers of the organization have access to get them in and out. It only has one story and it's built to be located on the ground. The rabbit hutch is 2 feet tall in length and 4 feet wide. It also has a storage room for their litter area. I want to use wood that is safe for the rabbits to build it and chicken wire for the sides of it.

Alhamzah Mohamed's (KingHamza) Structure

My structure has a roof that is broken up into two parts, one is 4 feet long and the other is 2 feet long. It uses chicken wire for the side parts and I have a ramp that goes from the bottom to the top. I have a first and second floor. I have a door for the rabbits to enter through and my rabbit hutch looks like a mansion. It is a big hutch and I need a chicken wire, roof, ramp, screw, wood , and a door.

We have all voted and chosen to use Kayden's rabbit structure idea with some of Fian's idea added on to it.
