

1. A more efficient chariot model for middle schoolers to use on Latin Day.
 - a. A better way for it to be held, a more comfortable seating area, and better wheels for it to move faster
2. The problem is that our chariot is not allowing our school to win the race. The Garrison middle schoolers are racing against Bryn Mawr middle schoolers. This happens every year at Garrison on Zolenas field or Bryn Mawr's turf towards the end of the school year. It happens as a tradition.
3. Solving this problem will help and give the Garrison middle school a chance to beat Bryn Mawr.
4. Our primary stakeholder is Mr Beretta because he is the Latin teacher who facilitates Latin Day. Mrs. Schmidt, Mrs. Anderson, Seggy, and the middle schoolers would be interested in our solution because they are all a part of Latin Day.

5.
