

Fruit Fly

Team: Cheesecake

Element A: Presentation and Justification of the Problem

Our boarding school residents need a way to remove fruit flies from their dormitories. This is because residents are irritated by the fruit flies and they could also pose a health risk. The fruit flies are attracted to a food item that was left in the dormitories a few weeks ago. Fruit flies have a short reproduction time so the quicker they are removed the easier it will be because there are less flies to remove. Quality of life in the dormitories would also improve if the fruit flies were to be removed.

We can solve the problem by making a solution that will be able to keep the flies from staying in the room. Solving this problem can help out the stakeholders because they will know how to solve the problem in the future by using our designs. The stakeholders will also be able to use our designs and see if it works well. Our primary stakeholders are the residents of the dorm and the dorm parents because they got affected by the fruit flies so this project will help deal with them in the future.

This problem needs to be solved because we want to prevent the fruit flies from spreading to more decaying food or going to another room. It is important to remove the fruit flies because if you do not remove the flies you will have an infestation. It is also important because we need to be able to test our design so getting rid of the flies will help determine if the trap works. The fruit fly trap will be important for the reason why we need to remove the flies.
