

Element A:

1- Element A: Presentation and Justification of the Problem

Due to the extensive clutter of supplies in classroom storage rooms, cabinets, shelves, containers, etc., classes have been extremely affected by the [unappealing organization](#) and the time wasted trying to find supplies that are unable to be reached for both teachers and students. Many teachers and constructors have attempted to improve the structure of cabinet storage, but have never made it a priority. The clutter of the storage areas alone have made the classrooms look messy; however, there is also an excessive amount of plastic water bottles left behind from students that [overflow the recycling bins](#). This introduces a possible way to incorporate the two issues.

The [stakeholders](#) of this project are Mrs. Aldridge and her students. As the clutter is a problem for her to find places for supplies, students also have a difficult time since they don't know where their teacher has placed anything. The stakeholders want an easy way to access their supplies, as well as [a system that will make putting back the supplies much neater](#). Creating adjustable shelves with labels will make this process much simpler. But, there's more...what do we do about the water bottles? Reusing the plastic bottles can help solve two problems in one. The stakeholders have asked for sturdy shelves, as well as, cylinder containers made by recycled water bottles so that they don't go to waste. We also have to consider the following constraints: shelves and containers must be sturdy, must be visually appealing, a budget of \$15, must help implement and encourage an organized system (labels).

The final purpose of this design should be more [accessible](#) storage shelves and containers. The design will prove to be successful when it can be shown to still be durable after much use and it can keep the space looking clean, as well as hopefully reducing the oversupply of plastic bottles. This matters to the members of classes as well as teachers who need a more organized classroom.
