

Element A: trying to find a new way to water plants , trying to discover an easier way to keep plants watered

A2. we researched on how most engineers hve made thiers and we wanted to point out some problems they may have had,most of the other models seemed to work perfectly fine so were basing our product off of them. The mai problem is are the plants going to get enough water, and are they going to get just the right amount and not to much.

A.3 solving this problem can impactother stakeholders, if our design was to produce more water with better quality.

A4. members of the company that are neededto maintain
