

We have been asked by the Brentwood High School Theater department to create a rose for their production of Beauty and the Beast in late February 2024. Mrs. Moody and Mr. Grimes. The directors of the production have requested that the rose be large enough to be seen from the back row of the audience. The rose needs to be illuminated by the theater lights so it is able to be seen clearly and to add a magical element to the production. Additionally, the rose needs to be able to drop a certain number of petals on command in multiple parts of the show, and all of the petals need to fall from the stem by the end of the play. The rose plays a significant role in the play as it drops petals multiple times, signifying character development. By the end of the play, there should be no petals left. Primary stakeholders in this project are Mrs. Moody, Mr. Grimes, the actors, stage crew, and audience. These stakeholders are all relying heavily on the rose being functional and working to the mentioned criteria in time for them to rehearse the production as needed. The audience are not interacting directly with the production, however, their enjoyment of the play is partially dependent on the functionality of the rose. The rose must be 12-14 inches tall, has to be clearly visible from the back row of the audience, different amounts of petals must fall during multiple acts throughout the play, rose must be reusable for at least 10 shows/rehearsals, and the final product must be complete by the 15th of February.

Criteria:

1. The rose must be 12-24 in tall.
2. Has to look like a red rose from the audience.
3. Petals fall on command.
4. Remote controlled petals that fall when someone pushes a button.
5. Has to be reusable for at least 10 shows/rehearsals.
6. The rose must lose all of its petals by the end of the show
7. The final rose would need to be made by the 15th of february
