

Element A:

Problem:

The task of this project is to design and build a spinning pencil holder for our stakeholder, Ms. Grever, because she wants an easy way to let students get supplies. This holder will allow most of her supplies to be in one spot and allow the student to grab them whenever they need to. Ms. Grever also may need this to put on her desk so she can be more organized with the supplies around her. [360-Degree Rotating Pen Holder](#).

Justification:

In today's world, [pencils](#) are used by children all over the world so having some holders of place for them to be stored would be nice. In the past 200 years, [pencil holders](#) have always had some type of functionality. It is important to have a place to store supplies and allow one to be organized.

Stakeholder Concerns: Five stakeholder that may be impacted by these problems are:

- Ms. Grever
- Student
- Other teachers
- Schools all over the world
- People who work in offices

To solve the solution, we need to find a way to protect student from the supplies laying out around the class.
