

MyDesign Portfolio

Element K Initial Template

What went well?

The planning portion- we all decided on a design easily without any arguments

Building- ours actually worked every time unlike some of the other groups

What didn't go well?

The planning- we had a little trouble figuring out what would work best with materials because we were limited on materials

The building- we had to adjust everything based upon the requirements

Lessons Learned About the Engineering Design Process (K3)

The designers need to consider all of the criteria that they is required. They need to consider all of the problems that could occur before building it.
