

Element K: Reflection on the Design Project

K1

- We wanted to make a barrel for the school so we can put water to use and further develop the schools garden
- We started reaching out to schools with barrels in their gardens for tips and obviously to know how to exactly do so
- Planned on building a barrel from school but we gave up after Mr.Lopez recommended we just buy one.
- We started looking at websites that can provide us with barrels, then tried to order one from the government but that took too long so we ordered one from Amazon using school funds.

K2

- We made sure to listen to Mr.lopez's recommendation and we also made sure to not use too much funding but rather a good amount for both the school and us.

K3

- We learned to split up work between group members for most efficiency and to get our work done quickly.
- We held each other accountable for the work we were assigned to
- We also made sure to have fun while working, etc.
- We also learned that not everything goes well and we learned to go with plan B if plan A didn't work out.
