

- a. defining the problem
 - i. Lack of art in US buildings
 - b. Brainstorming/ idea selection
 - i. We needed the piece to be able to move, so we immediately thought of a motorized piece of moving art. But, after simplifying things we all came to an agreement on a piece of art that is free-flowing, meaning it can move by itself in a way.
 - c. prototype design
 - i. After finding multiple spaces to put a piece of kinetic art, Hadley sketched a prototype of our design for each space. We first researched different types of kinetic art and then came to the idea of mirrored tiles. This allows light reflection and by hanging them on string they can move.
 - d. prototype building
 - i. We ordered a canvas frame after realizing that was the most straightforward option. Next, we were stuck on how to hang the string of mirrored tiles from it, so we asked Ms. Seltzer. She gave us small screws with a loop to tie things from it. The laser cutter was made possible by Ms. Seltzer and Mr. Vogel. Mr. Vogel assisted us with creating a more seamless online template design of what we would later laser-cut.
 - e. Testing
 - i. We tested our laser-cut design on a piece of scrap acrylic, which allowed us to use the laser cutter and make revisions to the Inkscape template that we needed.
 - f. evaluation and iteration.
 - i. Overall the outcome of our project was successful and turned out better than expected. Although the work was meticulous and time-consuming, it was worth it in the end.
2. I think our group was really good at teamwork and agreeing on one common idea. We each had a role in creating our kinetic art piece. Next time I would ask for help sooner from Mr. Vogel with our template, he made it more uniform which minimized mistakes during laser cutting and helped the overall aesthetic of our project and waste of materials.
3. It's extremely beneficial to divide and conquer while creating the design itself. Begin as a whole on the same page with everything and then assign roles to each person while in production. It will help things go smoothly and increase efficiency.
